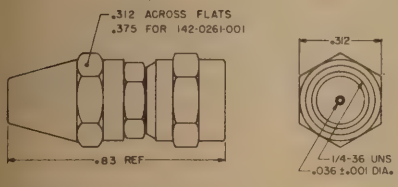
JCM Miniature Coaxial Connectors

COAXIAL CONNECTORS

The JCM connector is a semi-precision, miniature (3mm) connector giving repeatable electrical performance from DC to 3 GHz. At a fraction of the price of MIL-C-39012B SMA connectors, the JCM offers full mating compatibility with SMA types.

The bright gold finish is more dense and twice as hard as ordinary gold. The non-galling finish is 40% more resistant to wear and abrasion. Plating is 98.5 to 99.5% pure gold with a Knoop hardness of 120-140.

Cable clamp JCM plugs and jacks consist of 5 or fewer parts which are easily assembled. Only one set of stripping dimensions is required for all cables from 0.070 to 0.220" overall diameter.



Beryllium-copper contacts assure superior spring qualities and lowest contact resistance.

Rib-Loc™ terminals and jacks

With Johnson Rib-Loc insulated components, commercial equipment designs can reflect size reductions formerly limited to military equipment applications because of high cost. "Rib-Loc" design offers excellent retention — considerably better than the most widely used TFE insulated types. Terminals are brass, silver-plated and iridited for good solderability.

Specifications, all "Rib-Loc" components:

Pullout force 21 lbs.; turning torque 18 oz. in.; capacitance, .050" thick panel at 1 mc., 1.00 pf.; flashover voltage (DC) 5300; max. service temperature 250° F.; leakage current at 3500 VDC, .01 ua. These are typical test measurements, not necessarily limit values.

MICRO-GATOR CLIP

(Smallest Insulated Clip Ever Made)

U.S. Patent No. 2,762,028 Trademark Reg.

Micro-Gator

Micro-Gator with Insulator

The alligator clip with the microscopic tip! This is the alligator clip you now can use where no other clip will do . . . on printed circuits, in tight spots and on tiny terminals too crowded for anything but its microscopic tip. Including separate skin-tight insulator the tip is no bigger than the head of a pin! Yet the Micro-gator has ample thumb grip, and plenty of bite to stand up straight on the smallest terminals. Ample 1/32" jaw spread. 1 3/32" long. Solder connection. Skin-tight flexible vinyl insulator (sold separately) has "lip-action" tip slot so that jaws stay covered whether open or closed.

Crimping ears. Solder connection. Surprisingly strong bite penetrates corrosion and coatings.

MOLDED CABLES AND ADAPTORS

National Tel-Tronics molded cables and adapters adhere to the same high standards of quality that have been followed by the company throughout its' more than 20 years of manufacturing all types of connectors and terminations. All the plugs, jacks, and other connectors used in these cables are manufactured by NT.T and are premium grade. Dimensions are exceptionally accurate. Assemblies are precise. The highest dielectric plastics are used as insulators.

Modern handle shapes provide a clean, functional appearance and non-slip gripping areas.

The molding compounds are the finest quality, dense, virgin PVC., or vinyl. The cables are made from heavily insulated, thin strand wires that are extremely flexible and durable. Exceptional freedom from noise results from the use of fully shielded cables having a nominal capacitance of 30mmf/ft. Only NT.T cables offer all these features PLUS a TWO YEAR GUARANTEE against defects and the most unique packaging in the industry.

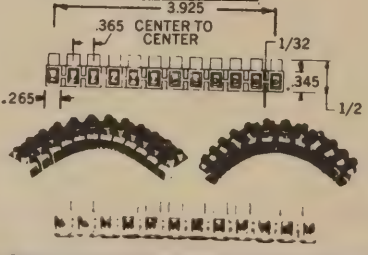
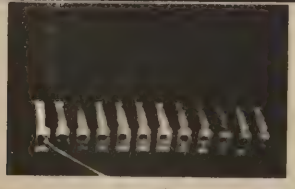
Like Type No. 905, the No. 900 terminal block is solderless, and is molded of hard black polyvinylchloride. Push buttons are molded of red polyvinylchloride.

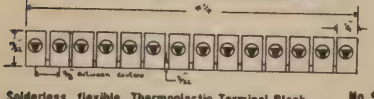
These terminal blocks have extremely high dielectric properties and are approved to resist 440 volts or 500 volts when mounted on insulated surface. Maximum current 27 amperes, maximum heat capacity 70° C. Maximum wire size applicable AWG #12. Maximum contact pressure: 13.22 lbs. Connection of conductor is extremely fast. Press the red button and insert the wire. Release pressure for locking. The beryllium copper contacts are molded into the block. Type 900 is available for 24 connectors. It may be cut to smaller size if required.



905 SERIES • FLEXIBLE



Type No. 905 Solderless Terminal Blocks are specially designed for applications where space and weight conservation are important factors. Because they are molded of flexible polyvinylchloride material they may be bent in any direction to fit contours and sharp angles. Typical applications for these terminal blocks include missile guidance systems, computers, aircraft communications, underwater detecting equipment, etc.



The shortest distance between the live parts of Type No. 905 Terminal Block is 3/8". Its brass terminals will accommodate a #10 wire as a maximum. The polyester material of which the blocks are made is rated at max. of 30 amps, 380 volts, or 440 volts if mounted on insulated surface. Maximum heat capacity: 60° C. Insert conductor in block and tighten the set screw.

Flexible Terminal Block No. 905 measures 3-$^{39}/_{64}$ long, 5/8" wide, 1/2" high and 11/32" between terminal centers. It may be cut to smaller sizes as required.

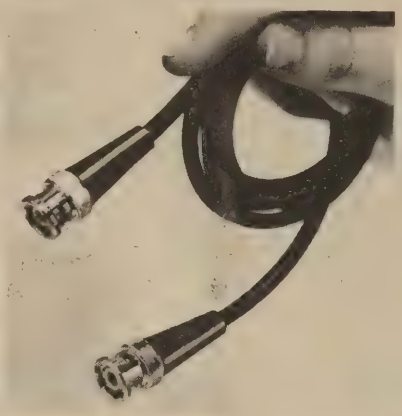
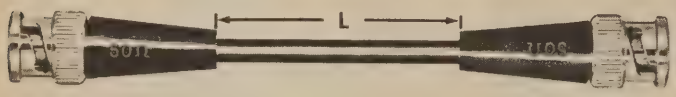
CABLE ASSEMBLIES



STRESS RELIEVED AND WEATHERPROOFED CRIMP BNC CABLE ASSEMBLIES



These new cable assemblies feature polyethylene collars which are injection molded directly onto cable jacket and connector body. The resulting encapsulation offers two outstanding advantages:

STRESS PROTECTION against failure from excess bending, flexing, twisting;

WEATHERPROOF SEAL between cable and connector.

Connectors have non-tarnish finish and conform to MIL-C-39012

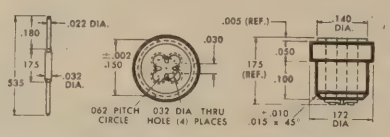
PRESS-FIT® TEFLON* CLOVERLEAF® RECEPTACLES



. . . providing the economies of dip-soldering with the inherent reliability of wired chassis construction

The "Press-Fit" Cloverleaf Receptacle provides economical yet uniformly perfect solder joints by means of dip soldering on a metal chassis. The unique Cloverleaf configuration permits insertion of four or more wire leads, plus an optional center post for mounting additional components after the dip-soldering operation. This design provides an encompassing hold on the leads, while providing for excellent capillary flow of solder. The Cloverleaf receptacle is a Sealectro "Press-Fit" design. Virgin Teflon insulation, precisely machined to "Press-Fit" into the chassis provides fast, positive and economical installation.

The reliability of dip solder joints made with the Cloverleaf receptacle, combined with the inherent dependability and repairability of metal chassis construction makes it ideal for use in high density, complex electronic instrumentation packaging, while the low cost of the terminal and its simple installation provides a new and outstanding assembly technique for premium quality radio and television manufacturing.

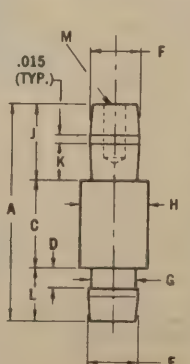
PRESS-FIT® TEFLON** SPACER/BUSHINGS

The Newest and Best Way to Mount P.C. Boards to Metal Panels and Chassis

Mount and insulate P.C. boards on metal chassis or panels without nuts, bolts, or lock washers. The new Press-Fit Teflon* Spacer/Bushings save assembly time while providing an economical and mechanically secure mounting device.



Machined from pure Teflon*, these new units are designed for various thickness P.C. boards and chassis or panels. Insertion in the chassis is a simple, one-step operation. The grommet end of each Spacer/Bushing is simply snapped in pre-drilled or punched metal chassis holes with entrance edge broken. Once inserted, they're in for good. P.C. boards require only mating holes for the opposite end of the Spacer/Bushing and may be snapped on and off of the mother board at will.

NOTE: Mtg. Hole .152 ±.002 Dia. in .062 ±.006 thick chassis.

PRESS-FIT® Performance, whether measured in function, reliability, life or costs, cannot exceed the performance parameters of the components involved in the equipment. This basic fact was recognized by Sealectro in 1952 and led to the design, development, and introduction of the Teflon insulated "Press-Fit" terminal as a superior performance component, providing greater reliability, better electrical connections, and improved cost factors on the production line. These outstanding features have established Sealectro as the leading supplier of Teflon insulated terminals throughout the world.

The units described in this catalog are available for the off-the-shelf delivery from your local authorized Sealectro distributor to provide you with the fastest possible delivery and shortest lead time requirements. If additional information or terminal configurations other than those listed are required, Sealectro's distributor, field representative, and factory personnel are at your service.

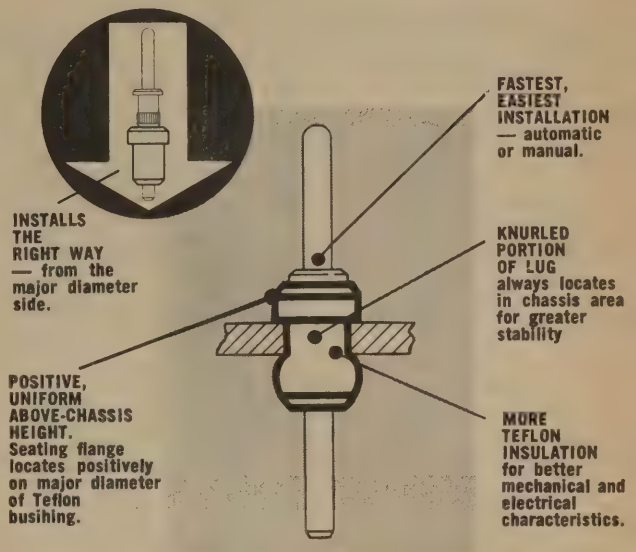
NEW! For chamfered or non-chamfered holes

Rivet-Loc™ patented



TEFLON INSULATED TERMINALS

Rivet-Loc terminals overcome all the inherent shortcomings of the older semi-assembled design which assembles by pushing the metal lug into the minor diameter of the Teflon bushing. Whereas the original semi-assembled design depended upon the mass of the metal lug displacing the Teflon, the Rivet-Loc employs a simple **Riveting** and **Locking** of the Teflon bushing assuring a better finished installation.

Rivet-Loc is installed in one simple, smooth operation with all insertion forces working together, instead of against each other as in the case of the previous semi-assembled design. Thus, the final seating and locking of the terminal in the chassis is uniform, even with wide parameters of tool settings.

Proved in millions of installations, Rivet-Loc not only offers far superior mechanical characteristics, it also has proved more dependable electrically. The smaller metal lug mass in proportion to the Teflon bushing provides far better dielectric strength. This extra protection of pure virgin Teflon enhances the dependability and performance of your equipment.

The numbers listed here are currently considered standard. However, new numbers are being added constantly. Virtually any terminal configuration or requirement can be met with the Rivet-Loc concept. Submit your requirements to Sealectro.

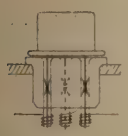
PRESS-FIT® ¼ TURN *Supercon* TRANSISTOR AND IC SOCKETS

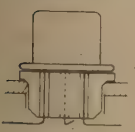
- **Supercon high retention precision Contacts.**
- **D-hole mounting without interference fit or loose hardware.**



An exclusive Sealectro design that can save tremendous time and money on the assembly line. Merely drop ¼ turn unit through D-hole and manual or automatic tooling automatically turns it 90°. Flatted portion turns free, while rounded area is grooved against D-Flat, producing a positive locking action in chassis.

MATERIAL:

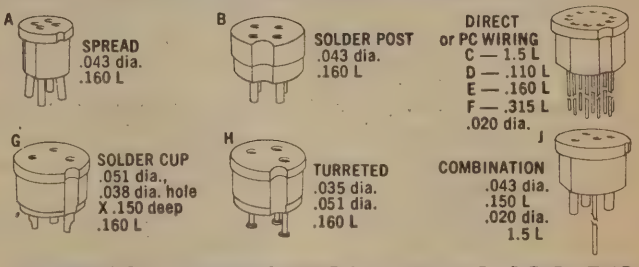
Insulator: Teflon
Shell: Brass
Contact: Beryllium Copper
Std. Plating: Gold over Copper



Supercon transistor and I.C. hardware features high-retention precision contacts. Allows fast easy replacement of transistor or I.C. Maintains retention, in excess of 50 grams per lead, through shock and vibration and repeated component insertions. Permits transistor or I.C. device interface into associated circuitry without electrical noise or signal dissipation due to contact resistance build-up.

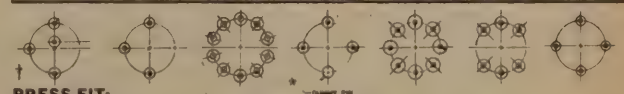
PRESS-FIT SERIES 60:
Transistor and I.C. sockets
Low-cost, high precision series 60 sockets. Permit plug-in and removal of TO-5, TO-18 cans and I.C. packages at will. Precise contact design provides a positive mechanical grip while making electrical contact with minimum resistance.

PRESS-FIT TRANSISTOR AND IC HOLDERS
Provides insulated chassis mounting with thru holes and soldering lugs for transistor leads and circuit connections.



PRESS-FIT TRANSISTOR AND IC BUSHINGS
Press-fit or grommet-type chassis mounting. Provides support for transistor can and thru-chassis hole plus strain relief for leads.

PRESS-FIT TRANSISTOR AND IC PADS
Provides insulation from mounting surface and strain relief for glass seals.



Sealectro Transistor and IC Socket and mounting devices provide the excellent electrical and mechanical characteristics of Teflon, and eliminate the need for loose mounting hardware such as quick-nuts, seating rings, screws, washers, etc.
Electrically, only the finest contact metals and platings are employed to assure lowest electrical noise, maximum contact retention and longest service life.

— Free 12 page catalog details all above transistor and IC hardware.

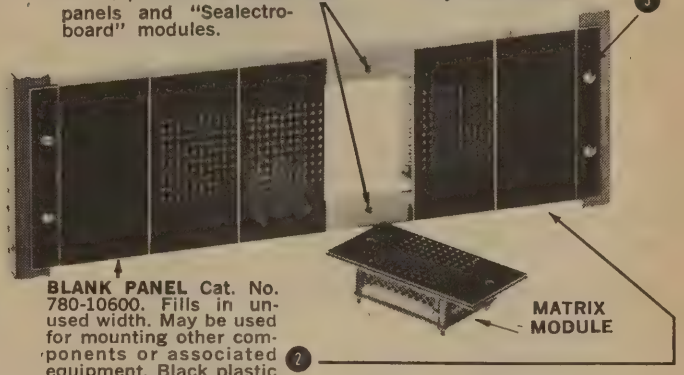
SEALECTRO PROGRAMMING DEVICES

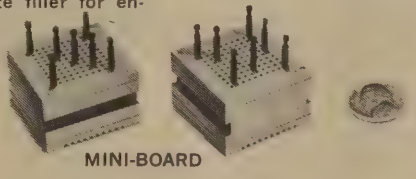
SEALECTRO PROGRAM SWITCHING

SEALECTROBOARD ® MODULAR CORDLESS PROGRAM BOARDS *



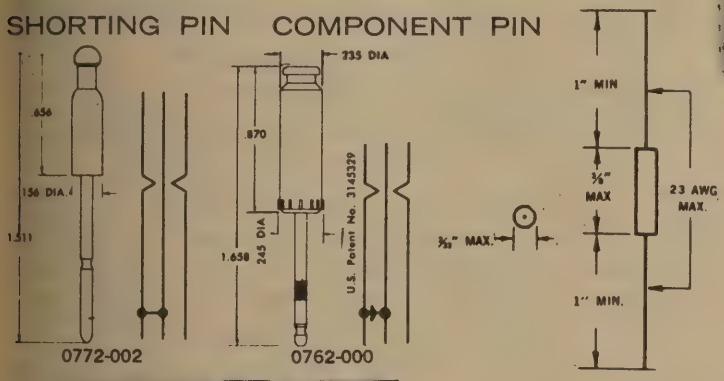
"Sealectroboard" programming and switching provides complete ease and simplicity of operation with drastic reductions in hardware and space. The units consist of two decks of bussed contacts running at right angles to each other in the X and Y directions, forming an electrical matrix. A single shorting or component holding pin is used to complete the program circuit . . . move the pin to a new location and a new program function is generated.

The "Modular Sealectroboard" provides an extremely flexible means of program system expansion with a built-in appearance. The system consists of only four standard component assemblies, designed such that when installed in a standard E.I.A. 19" relay rack, or bench cabinet, they result in a very attractive unit.

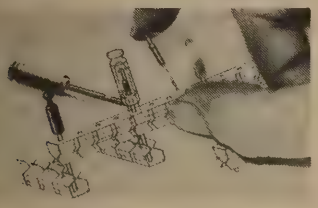


The "Modular Sealectroboard" can be expanded from a 10 x 10 hole matrix to a 10 x 60 hole matrix in one standard 5¼" x 19" rack panel. Additional panels can be added and interwired to expand program capacity as system requirements dictate.

MODULE RAIL Cat. No. 710-20001. Rails are designed for mounting on standard 19" relay racks. Offset is provided for flush panel installation. Mounting holes are provided for any combination (up to 6) of blank panels and "Sealectroboard" modules.



SIDE PLATE Cat. No. 708-70005. Provides end dressing, or return to relay rack frame.



BLANK PANEL Cat. No. 780-10600. Fills in unused width. May be used for mounting other components or associated equipment. Black plastic with white filler for engraving.

SLIDE 'N SWITCH™

DIRECT ACCESS PROGRAMMING CIRCUIT SELECTOR

- **Exclusive direct access to any circuit from any circuit.**
- **Up to 10 times as fast as thumbwheel switches.**
- **Modular expandable design.**
- **Compact. 2⅝" high. Each switch module 1 1/32" wide.**
- **Economical. Costs far less than average thumbwheel switch.**
- **Guaranteed for 250,000 operations per contact minimum.****
- **Terminates in standard PC card connector, or hard wire.**

An entirely new and different switching concept with maximum versatility built-in, Slide 'n Switch provides direct choice of output circuit without switching electrically through intermediate points. While in transit, the common side is connected through a termination on the rear of the unit to indicate the "in transit" situation or can be used as an electrical interlock.

This precision switch can be set in a fraction of the time required for thumbwheel units, as the handle is simply pulled out and swung in a single movement to the desired circuit.

Terminations on the rear of the switch module are printed circuit, spaced .125" center to center, and will mate with standard edge-mount pc card connectors. Terminal holes are also provided for hard-wiring with solder joints.

Completely modular, the switch modules are mounted on a threaded rod in any number desired. End caps complete the bezel for front panel mounting.

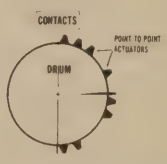
SEALECTRO PROGRAMMING DEVICES

SEALECTRO PROGRAM SWITCHING

SEALECTROSWITCH®

SERIES S-500 FIELD ADJUSTABLE PROGRAM SWITCHES



- 1, 7, and 15 Ampere Contacts
- Accurate Actuator Alignment Lines for Ease of Program Set-Up and Changes
- Manual, Stepping Motor and Timing Motor Drives
- Removable Drums
- Extremely Strong Extruded Frame for Durability
- Modular Contact Construction for Easy Field Replacement
- Both Camming and Point-to-Point Actuators
- High Visibility Drum Position Indicator
- Precisely Extruded Drum for 100% Program Repeatability

Sealectroswitch is a precision electro-mechanical timing and programming device featuring sliding actuators which may be positioned to select the operation of any, all or no contacts at any single drum position in the field and without special tools. A rigid frame, combined with a precisely extruded aluminum programming drum assures timing accuracy and program repeatability. A variety of options on contact ratings, drum drives, actuators, number of drum positions, and number of contacts assure the maximum in programming and timing flexibility for every conceivable application.

Both camming and point-to-point actuators are offered with standard model Sealectroswitches. The camming actuators, when mounted in adjacent program drum positions, do not allow the contacts to "break" between program steps. The point-to-point actuators allow the contacts to open between program steps. A three-in-one insertion tool is available for camming type actuators only and is preloaded with 100 actuators in black, red, blue or white for easy program set-up and identifications.

"LCT*" SEALECTROTIMER

. . . FIELD ADJUSTABLE, MULTIPLE FUNCTION, LOW COST PROGRAMMING SWITCH

- Economical, precise programming
- Sets up in seconds with 100% repeatability
- Up to 60 ON/OFF functions per revolution
- 15 Amp contact rating

Here's the answer to those many timer and programming problems. A unique combination of complete field adjustability, 100% repeatable, and multiple ON/OFF functions. No loose parts. No changing of cams. Everything required for complete flexibility in a single, compact, economical unit designed for extra-long life.

60 drum positions, precisely fabricated in at factory, permit up to 60 ON/OFF functions in a single 360° operation on a single contact. The drum is indexed, eliminating guesswork in set-ups, and also guaranteeing 100% repeatability when re-setting to a former program.

Actuators are merely slid by hand, to or out of operational position. In seconds, set up a complex timing program with varying time dwells for ON/OFF functions. In seconds, set up a pulse generator capable for supplying precisely timed pulses in various groups.

And all this costs no more than ordinary overlap type cam timers that provide a single ON/OFF function.

SWITCHCRAFT INC. Preh Audio Connectors

Here is the most complete low-cost family of miniature audio connectors available today. Exact replacements for plugs and receptacles, used on most foreign built tape recorders, radios and dictation equipment. Switchcraft/Preh 2 to 7 contact connectors include male and female plugs and receptacles with bright nickel-plated shells and plastic snap-on shells. Check these outstanding features . . . lock-ring coupling, silver plated contact pins for low contact resistance, contact friction coupling for low mechanical interference noise, exclusive "automatic" grounding and polarization provisions. Thirteen receptacles offer some form of internal switching. Positioning "Ground Key-Rib" or "Ground Contact"—electrically integral with the connector shell—is provided in each plug and receptacle (except those with plastic housings or shells) to ground or shield the connector shell. Designed for low level circuitry, they have unlimited use in commercial, industrial, consumer and military applications.

TERMINATING JACKS

These jacks are used in circuitry in which there is a need to maintain a known load in the circuit. When plug is fully inserted load is automatically disconnected and circuit transferred to plug. Similar to regular single jacks — fitting same cable, etc. (For example: 89-01-40-50 fits RG-58 cable).

TERMINAL BLOCKS, TURN AND PUSH KEYS, LAMP SOCKETS: Related Panel Equipment

TERMINAL BLOCKS

Originally developed for telephone and telegraph exchange use, now are quite generally found in broadcast and microwave relay stations, large instrument systems —wherever very large numbers of circuits need convenient places of termination.

Terminals are of three basic types: standard solder types, wire wrap type, and hybrid wire wrap on one side, solder on the other. All are of 0.040" brass, tinlate plated. Standard solder type available in four different lengths with "butterfly" notched design assuring retention of wire. All blocks having numbering along the top row. Costs as shown are for standard solder lugs.

"421 SERIES"

Molded of black phenolic plastic material, including base. Provides 20 terminals per row, in two banks of ten, with up to ten rows. Base 6 1/16" long x 3" wide. Has steel mounting strip inset in groove in base, with standard mounting dimensions and accommodating #10-32 screws. Interchange with W.E. "L" series, as indicated by ( ) following TRIMM no.

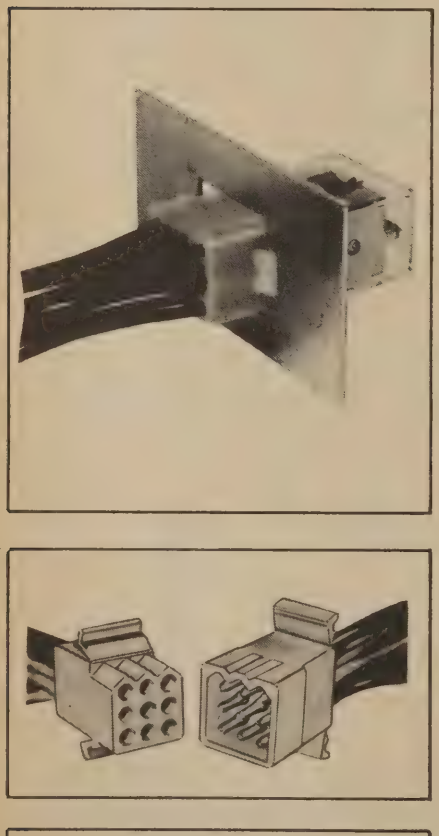
NYLON CONNECTORS

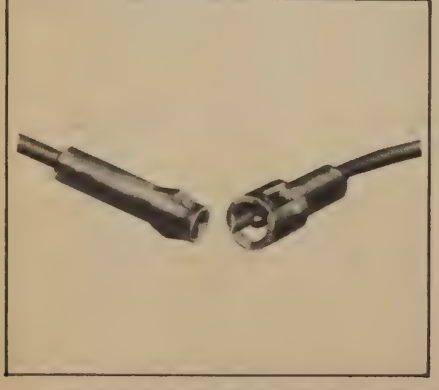
WALDOM/MOLEX NYLON connectors are being designed into some of man's most exciting circuitry. For they offer incomparable reliability, versatility and economy. Save time and labor. Provide a better mode of connection than can be obtained by hand soldering. They are being used in countless applications in the business machine, home entertainment, appliance, communications, measurement and instrumentation industries. Solving some of the most demanding circuitry problems. Making connections in some of the toughest environments imaginable. We offer Nylon Miniature Connectors in 1 to 36 circuits and standard connectors from 1 to 15 circuits. They are available with integrally molded mounting ears for ease of panel mounting. To simplify the attachment of individual contacts, WALDOM/MOLEX provides a complete range of manual production and prototype hand tools. Both male and female terminals may be readily extracted and easily replaced using WALDOM/MOLEX extractor tools. These tools permit simple servicing and circuitry variation.

PROVEN IN DESIGN AND PERFORMANCE

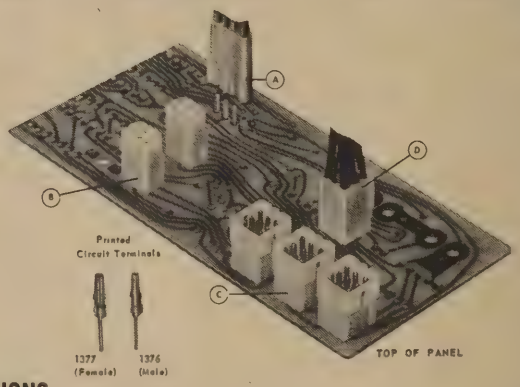
• Economy • Reliability • Integrally Molded Panel Mounting Ears • Excellent dielectric strength • Snap-in crimped terminals • Wide variety of circuit combinations • Simplified, fool-proof polarity • Positive lock • U.L. Recognized — CSA listed • Serviceability.



P.C. BOARD CONNECTIONS USING NYLON CONNECTORS



Simplify circuit connections to printed circuit boards with t versatile WALDOM/MOLEX units. They cut installation costs treme dously and also provide better, low resistance detachable connectior Pin terminals snap-lock into housing for dip or fountain solderi to boards. They are available in both male and female to perm either plug or receptacle to be board mounted. Mating plug receptacle terminals are crimped to cable connection and snap-lo securely into housings.



PIN CONNECTIONS

For printed circuit boards using a pin staked terminal — connecto from 1 to 15 circuits can be used. Polarity is obtained by the housir design. Additional polarity is provided by mixed use of male ar female terminals in plug and receptacle units. This also eliminat intermixing units containing the same number of circuits. Single lea connections using female terminals 1189 can also be used wi or without nylon housing.

• Low resistance connections • High contact pressure witho injury to printed circuit • Rugged terminals, completely encase in nylon for further protection • Hundreds of insertions are possib with no deterioration to the printed circuit • Low cost componen and crimped leads in receptacle reduce labor costs • Perfect polari between receptacle and printed circuit.

DESIGNER KITS

Contains parts to assemble male and female connector housings from SINGLE-CIRCUIT to 36-CIRCUIT COMPLETE CONNECTORS. (Total of 56 Connectors.) Includes crimping tool and pin terminal ejector tool.

A must for every creative designer, repairman and experimenter... as modern as today's circuitry. Eliminates need of searching for proper connectors or tools — everything is under one lid. This polarized Nylon Connector Designers Kit comes with all circuit capacities, complete with Male and Female housings, terminals, and crimp tool. Separated in individual compartments, each connector element is numbered and described, enabling you to re-order when running low.

This light-weight, unbreakable kit closes with a snap-lock to avoid spills and mix-ups. Each kit contains a prototype hand crimping tool, specially balanced and weighted for ease of operation. Machined from hardened-steel, this tool provides excellent, uniform crimps every time. It also cuts and strips wire. Each kit also contains a special terminal ejector tool, and detailed crimping instructions permanently affixed and mar-proof.

WALDOM/MOLEX also produces a Designer Kit in the standard series. Similarly, it has all the elements and tools necessary to make up standard connectors in all sizes. (Single circuit to 15 circuits in the standard series.) Total of 45 complete connectors.

P.C. EDGE CONNECTORS

STRAIGHT-ON

aight-on edge connectors are available in 6 - 9 - 12 - 15 - 18 - 21 - 22 d 24 circuit configurations. Bifurcated terminals provide a really id contact — excellent reliability. Yet you can slip the connector and off, time after time, without any damage to the printed cuit. Use of polarizing key, when necessary, guarantees positive arity. With or without mounting flange, as desired.

RIGHT ANGLE

Right angle edge connectors are available in 6 - 9 - 12 - 15 - 18 - 21 and 22 circuit configurations and offer all the advantages of the "straight-on" series plus the added feature of mounting the printed circuit board at a right angle, requiring minimum space.

PRINTED CIRCUIT PHONO SOCKETS

New — This phono connector is designed to drop into a P.C. board wave soldered — and becomes the receptacle for the male, shielded cable type phono plug. Simplicity — consists of an outer shell, an insulator, and an inner shell. The outer shell designed with tails to go through the P.C. board, allowing maximum spacing between center hole and the tabs of the outer shell — preventing solder bridging. Nylon inner shell ideal for high temperatures encountered in wave soldering. Center hole in P.C. board accommodates various length male phono plugs allowing male pin to protrude through P.C. board.

Conventional type phono plugs and receptacles are also available to complete your requirements.

ICRO SWITCH CONNECTOR AND TERMINALS

WALDOM/MOLEX single and three-circuit series nylon connectors for "micro-type switches." Both series of connectors offer you low cost, and especially the three circuit, a fool proof method of making quick connections on your "micro" type switches. The housings accept our crimp-on, snap-in quick disconnect female terminal type No. 05-06-0302, for 22-14 wire range or 05-06-0403 for 30-22 wire range, which fit a standard 3/16" male tab .020" thick. These female quick disconnect terminals are vastly different than the conventional type female quick disconnects. The insertion force (average 2# per term) is much lower and smoother. Therefore it will not force the switch out of proper adjustment.

THREE CIRCUIT — The single circuit portion is a unique feature of the three-circuit micro switch connector. It is purposely "sprung" to allow easy connections to all micro switch mfgs. as their tab locations do vary slightly.

SINGLE CIRCUIT — The single circuit micro switch connector fits any standard 3/16" .020 switch male tab.

The crimp type terminal is produced of 70/30 pretinned brass .010" thick — and mates with any standard male "quick disconnect" tab 3/16" wide x .020" thick.

Both the nylon connectors and the terminal are U.L. recognized at 10 Amps.

Prototype Crimp Tool — HT-1919 ..... $5.95
Manual Production Crimp Tool — HTR-2090 ..... 75.00
Extraction Tool — HT-1884 ..... ea. 1.75

Recommended for use with Micro-Switches produced by Micro-Switch, Cherry Electric, McGill Electric, Unimax, Potter & Brumfield, Licon, C. C. H., and others.

ELAY SOCKET

Four Pole — Double Throw Relay Socket (14 contact) 120 Volts — 5 Amps per circuit — This nylon relay socket offers a positive, snap-in mounting into the chassis hole — without the use of mounting clips or screws. Specially designed, one side of the socket has a "slide-in slot" while the opposite side has a panel mounting ear. And, it fits into the same chassis hole dimensions currently used by other socket manufacturers. It is inserted into the chassis from the underside, permitting the harness to be completely assembled (terminals applied to both ends of the wire) before mounting into chassis.

The low cost of this socket makes it economically feasible to use as a single or double pole socket.

The terminals are designed for low insertion and extraction force — and when necessary, more than one lead can be assembled into a single terminal. When the terminal is inserted into the relay socket, it is fully insulated — producing a dead back to the socket, eliminating shock hazards and other insulation requirements. With the HT-2215 terminal extraction tool, terminals can be easily removed from the nylon housing should servicing be required. Panel cutout dimensions — 1.015" x .858".

Manual Production Crimp Tool — HTR-2262 ..... $75.00 each
Prototype Crimp Tool — HT-1921 ..... 5.95 each
Extraction Tool — HT-2215 ..... 2.50 each

Recommended for use with relays produced by — Conmar Electric Company, C. P. Clarke and Company, Potter & Brumfield, Sigma Instrument Inc., Guardian Electric Company, Parelco Inc., and others.

Solid State Timers

Rear Mount Type

Plug-in Type

Versatile standard timers meet the broadest range of applications. Plug-in or Rear Mount types; solid state timers for delay, interval, or D.O.D. (delay on de-energization) timing modes. **Features:** Exceptional repeat accuracy; transient protection; eleven time ranges; isolated outputs; AC or DC input; relay or solid state switch; low operating temperature and no first cycle effect. UL and CSA recognized. **Repeat Accuracy:** ±2% of set point under constant voltage and temperature; under 1 second, a constant of ±20 msec applies. **Temperature Range:** +10° C to +55° C ambient. **Size:** Plug-in, 2.50″ w. x .875″ d. x 4.505″ h. (including .625″ h. knob and .580″ plug length) max.; Rear Mount, 3 7/16″ w. x 2 1/32″ d. (plus knob, .625″) x 4 3/8″ h.

Termination

Plug-in Type: 8-pin plug; except Series 2112 w/relay 11-pin plug. **Rear Mount Type:** 8 terminals, delay mode w/relay; 10 terminals, interval or D.O.D. w/relay; 4 terminals, delay mode solid state output; 6 terminals, interval or D.O.D. solid state output.

How To Order

SPECIFY SERIES:

Series 2111 Plug-in Type or Series 2211 Rear Mount Type: DELAY Mode Timer. Delay period starts on application of voltage. At end of set delay, integral relay or solid state switch energizes. When input voltage is removed, the output relay or switch de-energizes and timer resets.

Series 2112 Plug-in Type or Series 2212 Rear Mount Type: INTERVAL or D.O.D. Mode Timer. For these modes, input voltage is supplied to timer always with interval mode, on closure of a momentary or sustained switch, integral relay or solid state switch energizes the load for time period selected; at the end of timing period, the relay or switch de-energizes and load is removed from line. In D.O.D. mode, on closure of a control switch, the output relay or solid state switch energizes; timing period begins when control switch is opened; at end of timed interval, the relay or switch de-energizes.

ADD INPUT SUFFIX: Suffix **-1P** for 117 volts AC/DC, 50/60 Hz and 3.5 watts max.; e.g., 2111-**1P**. Suffix **-1C** for 24 volts AC/DC, 50/60 Hz and 3.5 watts max.; e.g., 2212-**1C**.

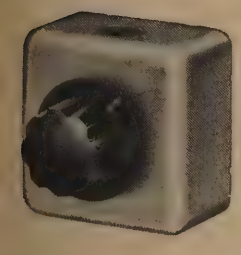
Now, for the first time, a Solid State Power Control is available which is adaptable to a wide variety of applications by a simple turn of a screwdriver!



An internal trimmer allows the starting point of the control voltage of the Ohmitrol to be set anywhere within the stated trimmer voltage range. (This adjustment can be preset at the factory at small additional cost).

From the starting point to full line voltage, infinitely smooth control is obtained by means of the control knob. An "on-off" line switch actuated at the counterclockwise end of the control knob rotator is provided on all models.

Ohmite solid state power controls are the smallest 1 or 2 KW controls available and offer the advantages not only of convenient size, but also of power savings, long life and low initial cost.

Two styles are available: the component style for panel mounting in equipment, and the lightweight, self-contained portable style. Portable units are completely self contained with grounded line cord and standard grounded AC receptacle.

Ohmitrol Controls are available with AC output and with two kinds of DC output delivered simultaneously. One kind consists of rectified DC, at approximately full line voltage; the other is the variable or controlled DC. This double output is useful, for example, for controlling shunt wound motors. Two-way terminals at the rear of the controls accept quick-connectors (push-on connectors), or can be soldered.

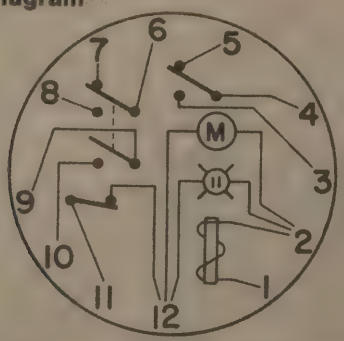
delay/interval timer

automatic reset / plug-in type

SINGER
INDUSTRIAL TIMER DIV

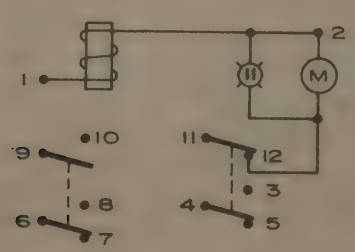
SERIES **GP**

An automatic reset, synchronous motor driven multi-purpose timing control that incorporates two sets of instantaneous contacts and two sets of delayed contacts. In its simplest application the series GP provides an adjustable time delay between the initiation of current to the timer and the subsequent operation of the timers internal load switches.



The timer can perform an interval function starting from a momentary switch closure because it is equipped with additional contacts. In this interval function a load is energized at the beginning of the time cycle and turned off at the end or when the timer reaches "zero."

dial, adjustment



Time settings are made by rotating the knob and black pointer to the desired time setting. In operation a red pointer will move to ZERO, thereby providing a visual indication of elapsed time. When power is removed from clutch of the timer the RED pointer resets to the position of the BLACK pointer, ready for another operation.

All dials, regardless of time cycle have 60 calibrations through 334° of rotation.

time delay timers

motor driven

hree basic methods are employed to generate a Time Delay: Synronous motor, Thermal Bi-Metal and Electronic. The Series GTD, TD, TD/CTD, H/CH, SF/CSF, TDAB, TDAF and RB generate e Delay function from a synchronous motor. This Delay is created y applying power to the timer motor/clutch circuit with a sustained witch closure (sustained is interpreted as simply being longer in ngth than the desired delay). When the timer receives power it egins a delay period, at the end of which occurs a switch operation. he load switch remains in the operated condition until power is emoved from the timer, at which time the timer automatically resets.

eries H, RB, SF, TD and MTD (6 sec.-30 sec.) utilize a clutch motor nd are wired per Fig. 1. The Series TDAB and TDAF feature an xternal clutch, wiring is per Fig. 2. The external clutch is also used in he Series CH, CSF and CTD, see Fig. 3. The MTD (60 sec.-3 hrs.) provided with an external clutch, wiring per Fig. 4.

he Series RB features 15 amp., non-inductive, at 115/220 VAC, PDT snap action load contacts. All other series are 10 amp., nonductive. Available operating voltages are: 115/60, 115/50, 220/60, 220/50. Consult factory for longer time cycles than listed.

SINGER

INDUSTRIAL TIMER D

An interval timer closes its load circuit immediately upon its activation.

Methods employed by various units are: electrical pushbutton, remote footswitch, mechanical push button and toggle switch. The circuit is closed (or opened) during the preselected period the timer is running. When this is completed, the load circuit opens and the timer is shut off. Depending upon the individual timer, reset is accomplished automatically or manually.

motors

Heavy duty synchronous motors, U/L and CSA approved. These motors are available in any of thirteen standard speeds. In cases where short time cycles are required of a higher torque motor is used. On the MC-O and RC-O Multi Cam Timers a High Torque motor is standard. These motors are built and guaranteed for long trouble-free performance.

switches

Single pole double throw snap action, U/L and CSA approved, totally enclosed. The switches are mounted on individual brackets, permitting removal of each switch without disassembling the entire switch bank. The switch contacts are rated at 10 amps non-inductive AC.

electrical characteristics

The Cam Timer Series can be supplied for 115 volt or 220 volt AC operation on 25, 50, 60 or 400 cycle frequencies. (As well as 6, 12, 24, & 30 volts DC)

gear rack assemblies

50 standard ratio gear and rack assemblies are stocked for changing overall time cycles on the Cam Timer Series. These assemblies may be changed by removing a 5/40 screw, setting the rack into the recess, and retightening the screw. Refer to chart for particular time cycle and gear rack assembly.

individual cam adjustment (series CM, MC, RC only)

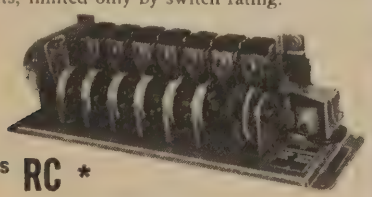
Standard cam construction is such that the ON or OFF periods may be adjusted from 2% to 98% of the total time cycle. Cam adjustment consists of loosening the nut on the face of the plate, rotating the movable cam segment to the percentage of ON or OFF period desired, and then tightening the nut. The cams are made of corrosion resistant aluminum.

timing sequence (MC, RC only)

Each cam is individually mounted on the shaft by means of a heavy duty friction disc which allows easy finger adjustment of timing sequences. Individual positioning of the cam is also made possible without the use of set screws and wrenches, and permits rapid adjustment. On the Series MC and RC Multi Cam models a drum calibrated from 0% to 100% is mounted on each cam, this drum in conjunction with a mounted pointer acts as a guide when setting related programmed sequences; thus providing a reference point for use during the cycle.

ordering information

When ordering a Cam Timer please specify the following information:

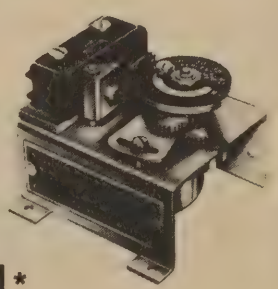


1. Voltage and frequency of motor current.
2. Number of switches desired.
3. Time cycle selected from chart. (refer to motor number plus gear rack number. Example: MC4 Timer with C-12 Gear Rack.)

SERIES **RA** *

** single cycle timer

The Series RA Timer is designed to provide a single timed electrical cycle upon momentary actuation from a remote position. The cam is a circular plate notched at one point in its circumference. Coincident with this notch is a small plate or a pawl. This plate is contoured to the periphery of the cam, and pressed against the cam face by a spring and a stud. Upon actuation, the relay mechanically disengages a lever from the cam notch, simultaneously starting the motor. During the revolution of the cam, the relay lever rides on the circumference of the cam. At the end of the revolution, the pawl guides the lever into the notch, stopping the motor after completing one revolution. The single switch handles the timer motor and the external load circuits, limited only by switch rating.



SERIES **RC** *

** single cycle multi-cam timer

The RC Multi Cam Timer is identical to the RA, but operates from 1 to 20 additional circuits. This design enables the user to have all the advantages of the Series MC, plus the single cycle homing control of the RA.

SERIES **CM** *

The Series CM Timer repeats a continuous, adjustable ON and OFF electrical cycle. This timer consists of a heavy duty synchronous motor, adjustable cam, and single pole, double throw snap action switch, assembled on a base mount chasis. The cam is coupled to the motor by means of a simple gear and rack assembly, which can be changed by the user. Standard cam construction is such that the ON-OFF cycle may be adjusted from 2% to 98% of the total time cycle. The cam is calibrated in percentage for quick accurate adjustment. 50 stocked gear and rack assemblies are available for time cycles from 40 cycles (2/3 of a second) to 1 rev. in 72 hours.

multi-cam recycling timer

SERIES **MC** *

The MC Multi Cam Timer is identical in operation to the CM timer but controls from 2 to 20 circuits. The cams are mounted on a single driving shaft, coupled to the motor by a gear and rack assembly. Each cam is independently adjustable for 2% to 98% of the total time cycle. Individual cam adjustability enables the timer to be used as a programming device. The cams can be adjusted in any combination of timed sequences rapidly and easily. Total revolution time is determined by motor speed and the interchangeable gear and rack assembly.

c-cycles s-seconds m-minutes h-hours

1. ORDERING INFORMATION—Model number selected from top of gear rack chart, gear rack, number of load switches, voltage and frequency.

   ALTERNATE ORDERING INFORMATION—Required time cycle (one complete rotation of cam shaft), number of load switches, voltage and frequency. Since some time cycles are available in 3 model numbers, the use of the ALTERNATIVE ordering information may expedite delivery by allowing us to ship model in stock with required time cycle.

2. Multi-switch cam timers requiring time cycles in shaded area may require high torque timing motor. This is due to increased torque encountered in rapid time cycles. To determine need of larger motor; multiply required time cycle in seconds by 2/3, the answer will be the maximum number of switches that can be operated with a standard timing motor. EXAMPLE: Time cycle 15 seconds. 2/3 x 15s=10. 10 switches can be operated at 15 seconds with a standard timing motor, more than 10 load switches requires the use of a high torque timing motor.

Price added for Hi-Torque motors:

#0	1 RPS	$35.50	$60.00
#1	⅙ RPS	$37.50	$60.00

time measurement devices

Running TIME meters and reset time totalizers are designed to record equipment operating time. The running time meter accumulates total time whereas the reset time totalizer can be reset to 0 at any time by means of an external knob.

MODELS SC-100 / SC-60

Two models, SC-100 with a range from 1/100 sec. to 60 seconds, and the SC-60 with a range from 1 second to 60 minutes. Both models used to measure time intervals, and can be started from a remote switch closure, (see wiring schematic). Pointer reset accomplished by built-in pushbutton or remote switch closure. Finish, baked enamel on formed steel housing. Available for 115, 220 volts/60 or 50 cycles only. 115/60 — $68.50

MODELS C-8, C-8W, D.C. UNIT

The Series C-8 and C-8W Running Time Meters are heavy duty units featuring a rugged pulse wound clock movement. At the heart of this unique movement is a large winding solenoid that is pulsed from snap action contacts. These contacts operate every 40 to 60 seconds when the unit is energized. The unit is sealed against dust and moisture in a steel enclosure. The crystal over the dial is made of shatterproof non-yellowing plastic. The readout of the C-8 is in minutes with a sweep hand, and up to 99999 hours on the odometer. Mounting is by bracket on the Series C-8W or by flange with the C-8. Wiring connections are made on the back of the unit.

TYPE SPECIFICATIONS

1. "General Purpose" Calibration at ambient temperature (25°C) is within .002% of specified frequency.

2. "Standard." This type is adjusted to frequency at room temperature (25°C ±5°C) within ±.002%. The maximum frequency deviation is ±.005% from −55°C to +90°C.

3. "Special" Calibration at room temperature is ±.001%. The maximum frequency deviation is ±.0025% from −55°C to +105°C. The calibration tolerance of ±.001% can only be obtained when definite correlation (load capacity) and drive level are specified.

4. "Oven." This type is specially for "oven" use. Standard "oven" temperatures are 75°C ±5°C and 85°C ±5°C. Calibration tolerance at 75°C or 85°C is held within ±.002% of nominal frequency. Maximum frequency deviation is ±.0005%.

5. "Military Standard" CR Type Crystals for use in Military equipment can be supplied to meet specification MIL-C-3098E.

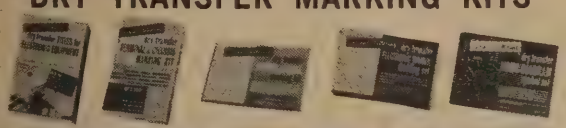
THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB and it's PRINTED!

Sharp • Clean • Fast

Not a Decal



No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality **INSTANT LETTERING®** transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

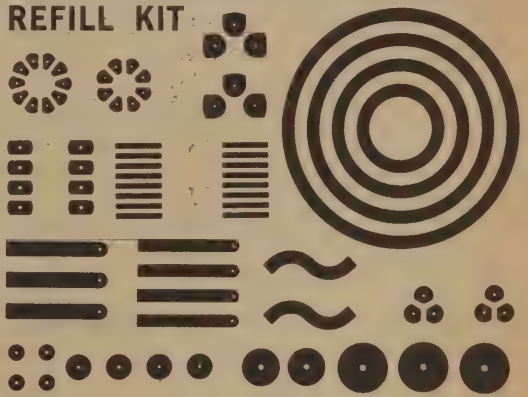
PRINTED CIRCUIT KITS

. . . with Dry Transfer Etch Resist

Our tough dry transfer inks do double duty as etch resists in this new series of kits for making printed circuit boards. Use them to make breadboards, one-of-a-kind prototypes and to handle those small modifications that used to require artwork and photos.



PRINTED CIRCUIT ETCH KIT

Designed with the experimenter and technician in mind, this set includes everything needed to begin etching precision circuit boards.
Contains:

- 4 copper clad phenolic boards
- 8 sheets of assorted etch resist patterns (see ER-2 for more complete description)
- 2 120 in. rolls of etch resist tape (one each in 1/16 in. and 1/32 in. widths.)
- 1/4 lb. concentrated etchant
- A combination storage box and etch tray

ER-1—Complete Set .....**$4.95** Each

DRY TRANSFER ETCH RESIST REFILL KIT

Contains 8 sheets of dry transfer etch resist patterns that include 1/16 in. lines, universal nesting circles, jogs, squeeze-throughs, universal flatpack and dual inline patterns, TO-99 (8 pin) and TO-100 (10 pin) microcircuits as well as TO-5 and plastic transistor pad patterns. Also included are two 120 in. rolls of etch resist tape (one each in 1/32 in. and 1/16 in. widths.) These transfers and tapes will withstand rapid-acting ferric chloride and many other fast-acting chemical etch systems.

ER-2—Etch Resist Refill Kit.....**$2.75** Each

DRY CONCENTRATED ETCHANT REFILL KIT

Concentrated ferric chloride type etchant in a handy vapor-tight ¼ lb. package.

WATER-TIGHT ASSEMBLIES

Water-tight construction: These Sub-Miniature Lights are completely water-tight on the face of the panel. Water-tightness is achieved by means of **retained O-ring seals.** One **O-ring** is retained within the back of the lens cap, the other behind the flange on the mounting bushing.

MOUNT IN 15/32" CLEARANCE HOLE. FRONT OF PANEL INSERTION WITH FIXED FLANGE

177-8430-0931-503

WATER-TIGHT DIMMERS

On the Dimmer type assembly, a third **O-ring** is mounted within the dimmer cap — so positioned as to assure absolutely no leakage through the dimmer slot. For data, request Catalog L-178.

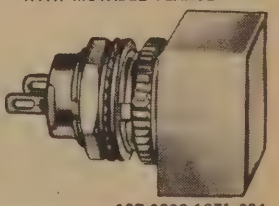
MOUNT IN 15/32" CLEARANCE HOLE FRONT OF PANEL INSERTION WITH FIXED FLANGE

183-9730-1471-602

The lens cap is effectively lighted by T-1¾ bulb with midget flanged base, which extends completely into the luminous portion. Fine solid color effects are obtained. The two-part construction permits opaque sides with lighted colored faces.



Lens caps may be rotated, permitting legends or cap edges to be easily brought into alignment after installation of the assembly; or they may be keyed, thus permitting them to be pushed into place only in a **predetermined** position.

Unique anti-rotation (locked) construction provides for secure keyed mounting of mounting bushing on panels.

LENS FACE COLOR: See listing — LENS COLOR — above. See lamp listing and range of voltages above.

To obtain ½" caps with non-rotatable feature, change catalog number prefix from: 183 to **186**; 185 to **184**; ¾" caps with rotatable feature: 188 to **191**; 187 to **190**.

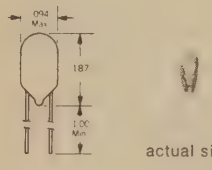
Over 300 IEE subminiature lamps that cost less and last longer

Now you need only contact your local distributor for any of IEE's extensive selection of subminiature lamps.



IEE's exclusive hand-mounted Swiss tungsten filaments aged at rated voltage from 24 to 36 hours for filament stabilization and to eliminate random burnouts are the best assurance any lamp manufacturer offers that the lamps you buy will meet or exceed specified life. And, they'll do it with uniform light qualities throughout that life. Every IEE lamp is selected by photometric light meter measurement for accurate MSCP also, so you never worry about whether the lamp in the box will do what it says on the box.

For these performance assurances you pay no premium price, in fact IEE lamp prices are *far below* unaged, non-selected, machine-made lamps.

That's why demand for IEE subminiature lamps is mounting daily. That's why your local distributor now stocks IEE subminiature lamps.

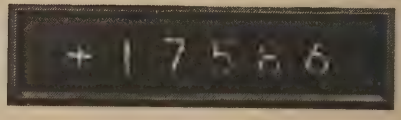
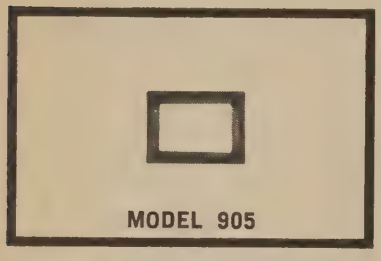
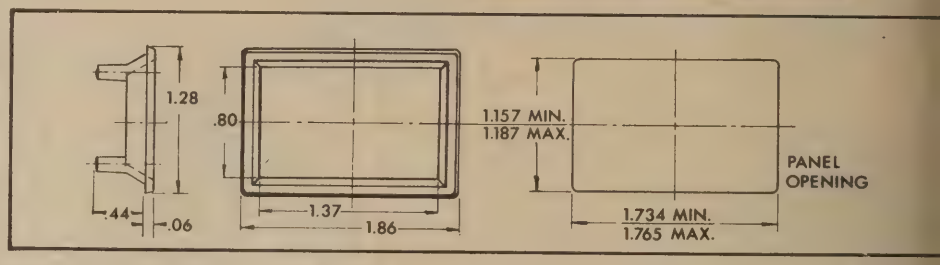
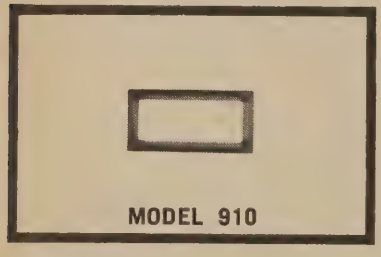
alpha-numeric display bezels

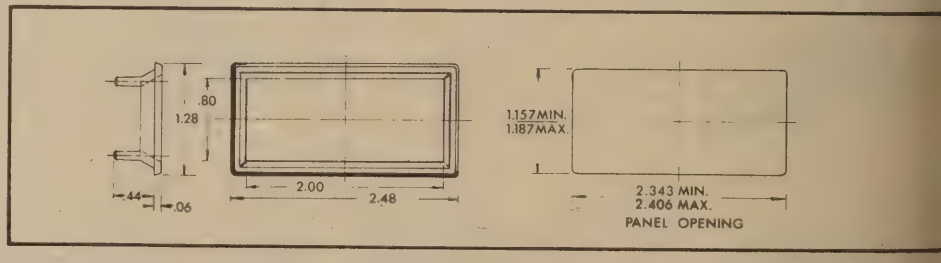


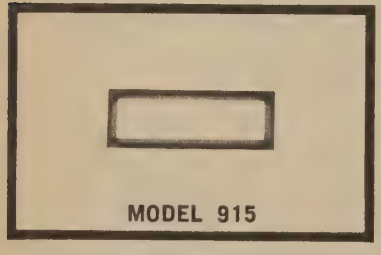
DIGIBEZEL



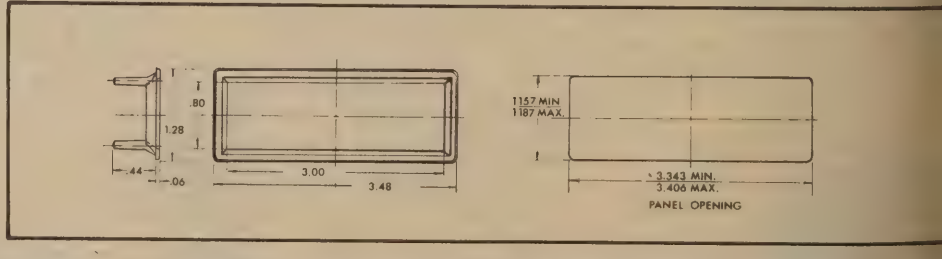


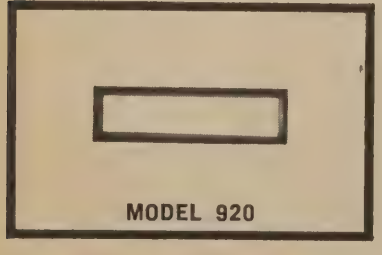


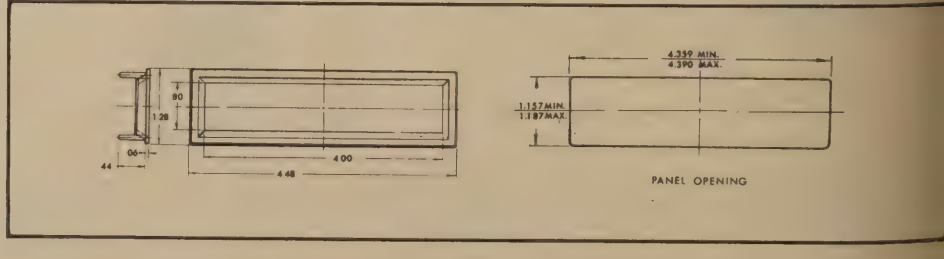


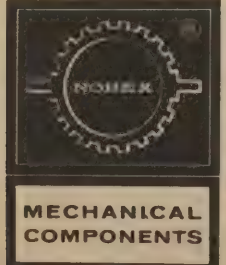


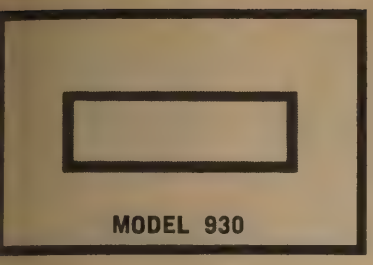
The first and only low cost, easy to assemble standard bezel for alpha-numeric displays. DIGIBEZEL will enhance the front panel lines of instruments and systems incorporating digital displays while providing maximum contrast in high ambient light conditions. DIGIBEZEL is a three piece assembly consisting of a front panel bezel, retaining frame and a circular polarized filter in one of four colors. Rear mounted spring clips eliminate visible mounting hardware. Seven standard sizes accommodate the most commonly used display devices in the industry, including the latest L.E.D. displays.

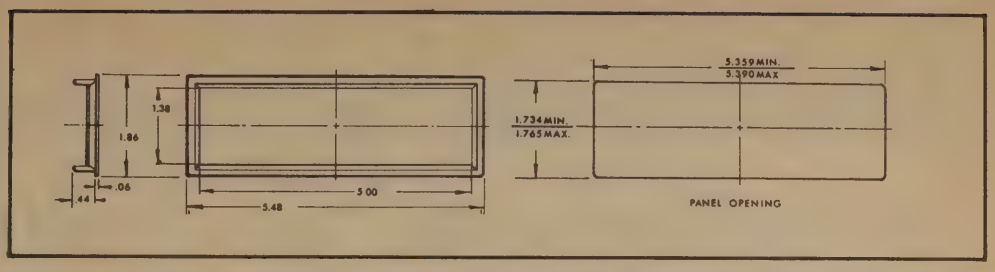


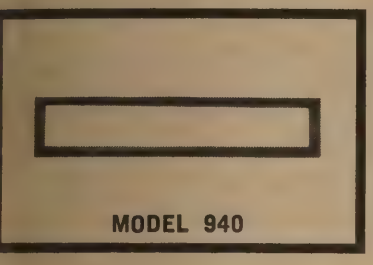












Manufactured in U.S.A.

nstallation

DIGIBEZEL is easily installed to the panel of the instrument by placing the back side (with bosses) through the rectangular hole cut into the front panel with "top" and "bottom" markings appropriately located. After the front bezel has been placed in the location the polarized filter is then inserted from the back into the recess provided. The DIGIBEZEL retainer is then placed onto the rear bosses using the correct side for appropriate panel thickness (Side 1 for 3/32", Side 2 for 1/8" thick panel) to secure the filter and bezel to the front panel. All three parts of the assembly are held together and in place by rear mounting spring clips.

mounting tool

An optional mounting tool is available from NOBEX for added convenience with DIGIBEZEL installation. The mounting tool is specifically designed to be used with the spring clip hardware supplied with each DIGIBEZEL assembly. The tool is manufactured of aluminum with an easy grip handle.

SPR-4
SOLID-STATE
PROGRAMMABLE
RECEIVER

$499.95 net

Drake engineering and the recent development of the dual gate FET make possible the first no-compromise, solid-state receiver.

Unlike receivers with bipolar transistors which have poor crossmodulation, intermodulation, AGC, and overload performance; the SPR-4 has signal handling capabilities superior to the best tube receiver. In addition, the SPR-4 has all of the advantage of a solid-state design such as low power consumption, mechanical and thermal stability, reliability, etc.

The Spr-4 can be programmed for short wave listening, amateur radio, laboratory, broadcasting, marine radio, etc.

FEATURES:

- Dual gate FET RF amplifier.
- FETs in signal path for low cross modulation and overload.

Both TMN and TMW types are designed for 100 K input and output impedance and have an insertion loss of less than 6 db. Four pin hermetic header matches small Winchester socket.
TMN filters are down less than 3 db at ± 7.5% of center frequency. They are down more than 18 db at ± 25% of center frequency. Attenuation is greater than 40 db beyond 1.75 Fc and .58 Fc.
TMW filters are down less than 3 db at ± 15% of center frequency. They are down more than 20 db at ± 50% of center frequency. Attenuation is greater than 40 db beyond 2.5 Fc and .4 Fc.
MNF and MWF (Minifilter) provide same performance as filters described above but are extremely miniaturized. Slanted toward use with transistors. Pin terminals ideally suited for printed circuits.

FREQUENCY METERS

OVER 25 YEARS OF CONTINUOUS PRODUCTION

VIBRATING REED METERS

The AERO Instrument Facility of Arnoux Corporation produces over 1000 different types and styles of Vibrating Reed Frequency Meters, with a proved history of usage spanning over 25 years. Unsurpassed for high performance and quality construction, all AERO Frequency Meters provide the inherent advantages of great accuracy (with 0.3% at 72°F, and within 0.1% on special order); long term stability (±75 ppm per degree F. from -60° to +180°); low power consumption; self-checking characteristics; high reliability; and extreme ruggedness. No adjustments are ever required on Vibrating Reed Frequency Meters. AERO meters are available with . . . . .

POINTER TYPE METERS

AERO's new line of Pointer-Type Meters feature advanced microminiature circuits for performing frequency-to-DC conversion with remarkable linearity and stability. These circuit innovations have now made pointer-type meters both economical and practical for production. Pointer-Type Meters are presently available in three frequency ranges, with accuracy and stability as great as 0.3 Hz in the 45 to 65 Hz ranges. The input voltage for all units is 115 ±15Vac, with power consumption approximately 2 watts. Operating temperature range is 0° to 150° F.

ONLY THE VERSATILE DESCO* Circuitracer*

GIVES YOU A 3-IN-1 ELECTRICAL TEST LABORATORY

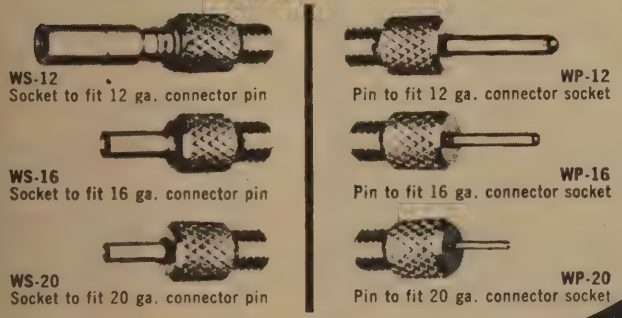
MODEL CT1-1
Weighs only 2½ ozs. LIST $5.95

Satisfaction Unconditionally Guaranteed

DON'T SEND A MAN TO DO A BOY'S JOB!

Are the technicians in your laboratories and shops using expensive meters and instruments for sample continuity and voltage checks? Speed up production through the use of the tool specifically designed for this application. A meter should be used only when the value of voltage, resistance or current must be known. Under any other conditions a Circuitracer will provide the required information faster and easier than expensive, bulky meters.

CIRCUIT TESTING WITH A CIRCUITRACER IS FASTER because the signal light is in the tip at the point of contact. This makes it possible to determine the existence of a circuit or voltage without removing the eyes from the test point to read a meter.



SAVE METER REPAIR MONEY BY USING DESCO CIRCUITRACERS. An overvoltage across a meter usually results in extensive damage which takes the meter out of service until repaired or replaced. The worst that can happen to your Circuitracer is a burned out lamp that can be replaced by the operator in less than a minute. Total cost, ten or fifteen cents for the lamp!

*T.M. Reg.

The CIRCUITRACER is the only electrical tester (other than expensive meters) that can test dead circuits, low voltage live circuits AND high voltage live circuits. It is made of the finest materials available and is designed for long life.

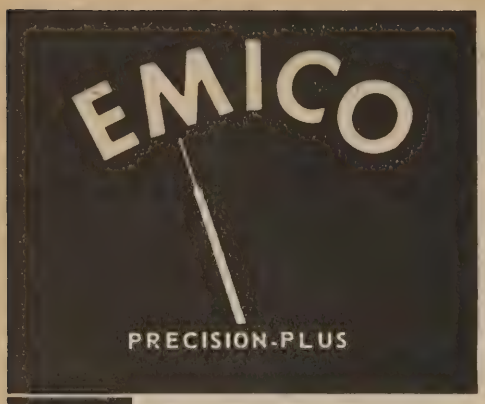
INSURE CONNECTOR RELIABILITY

Manual probing of harness connectors while circuit testing can damage connectors and impair reliability. Desco Test Probe Adapters were developed to provide a test fitting identical to the pins and sockets in "AN" connectors being tested. They make the same electrical and mechanical contact as the mating connector, and insure against scratching, bending and warping.

The adapters are made in three sizes to fit connectors using #12, #16 and #20 wire gauges. The sockets are gold plated copper with a brass sheath which retains a berylium copper spring. The pins are stainless steel to insure long life. All are made to rigid MIL-SPECS. The adapters will fit Desco Jumper Wires and the Desco Circuitracer* Tester interchangeably.

THE ULTRA LOW CURRENT Trantracer*

A SAFE, FAST, INEXPENSIVE "GO" — "NO GO" TESTER OF ULTRA LOW CURRENT SENSITIVE CIRCUITS



MODEL TR200 LIST $12.75

The Trantracer* checks continuity by sending less than 50 micro amperes through the circuits to prevent damage to solid state junctions and micro watt sensitive elements. Continuity is established as Go — No Go through circuit resistances of up to 400,000 ohms.

Maximum voltage applied to very high resistance circuits is 2 volts, low resistance circuits normally see millivolts and micro amperes.

PANEL METERS

BIG LOOK¶

Handsome, easy-to-read meters in two styles for all panel and control applications. All DC meters have self-shielded movement with pivot and jewel or taut-band suspension. Taut-band designs give great resistance to shock and increased sensitivity. Zener-diode, expanded-scale voltmeters available for improved narrow-range accuracy on 3½" and 4½" sizes. Snap-on, snap-off covers on meters. All types meet ASA Specification C-39.1.

Accuracy: ±2% FS, all DC and AC iron vane; ±3% FS, AC rectifier type (with 60-cycle sine wave at 25° C); ±0.5% of midspan, expanded-scale types. **Overload:** 20% momentary and sustained, voltmeters; 10 times rated current for 10 consecutive intervals of ½-sec. with 1-min. interval between successive applications, momentary; 20% for 8 hours, sustained, ammeters. **Scale:** Pivot and jewel, 90° rotation; taut-band, 100°.

Insulation: 2600 V rms hi-pot for all but 1½" models (1600 V rms). **Response Time:** Meet or exceed ASA requirements; 3 sec. max. for microammeters; 2 sec. max. all other DC ratings; 2.5 sec. max. AC ratings. **Damping:** 40% max. overshoot; 2.5 min. damping factor. **Burden:** 5 amps, 0.5 VA, 0.5 power factor for AC ammeter; unity power factor, AC voltmeter.

HORIZON LINE¶

BIG LOOK PANEL METERS

Accurate, qick reading with wide, border-to-border scales; free from shadows. Most popular meter design with low-profile, easy-to-read sense. Aluminum frame holds reflections to a minimum. Big, bold numerals over cleanly marked divisions for fast reading. Tapered pointers assure high accuracy. Taut-band suspension provided on all models except 1½" size. Standard 2½" and 3½" models come with sealed cases to protect against hair, dust, chemicals or other foreign particles. Shelf-shielded DC mechanisms; snap-on, snap-off covers.

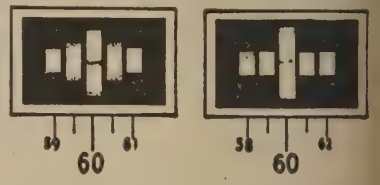
VIBRATING REED FREQUENCY METERS

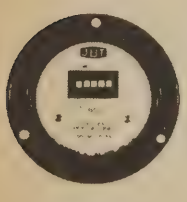
J-B-T INSTRUMENTS, INC.



MODEL 34-FX-ser. A, a popular 9 reed meter, shown half actual size.

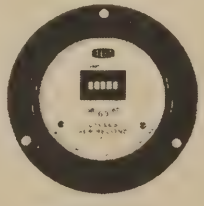
• **USES, Commercial and Military** — J-B-T Vibrating Reed Frequency Meters are used extensively in radio, telephone, television, and radar service, on engine-generator sets and standby equipment, in laboratories, in many types of aviation and electronic equipment, on panel and control boards, in inspection setups, and in high-cycle power sources — wherever constant or known frequency is important to accurate and efficient operation of equipment. Superior performance for commercial and military applications is assured by more than 30 years of continuous experience and know-how covering the design and complete manufacturing of hundreds of thousands of these instruments in our Connecticut plant. Current production incorporates several innovations covered by recent J-B-T patents.

• **ADVANTAGES** — At reference temperature of 77°F most models have guaranteed accuracy of 0.3% or better of the frequency being measured, but the tables that follow indicate that certain models may be ordered with accuracy of ±0.1%. Accuracy on interrupted DC may be somewhat less. High fatigue strength provides a safety factor for continuous operation. Temperature compensations are not required as frequency change per °F is only .0075%, negative. For example, a 50°F temperature rise causes a 60 cps reed to read only 0.2 cps lower than at reference temperature.

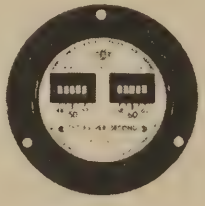


• **OPERATING PRINCIPLE** — The patented, simplified design used in the J-B-T meter operates on AC or interrupted DC. Each reed is adjusted to respond by resonance to the frequency shown on the dial. As the current excites the driving coil, the reed "in tune" with the frequency in the coil will respond by vibrating rapidly because of permanent magnet polarization and induced magnetism from the coil. The instrument is adapted to specified operating voltage by a series resistor. To determine frequency, simply read the reed.

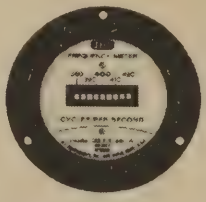
• **RESPONSE PATTERNS** — Breadth of actuation differs with the increments of frequency between reeds. For example, at 60 cycles, half-cycle steps give the broad response shown below at left, whereas full cycle steps bring the sharp response at right. In general, the lower the frequency the greater the amplitude, the higher the frequency the less the amplitude. Thus a 25 cycle reed normally will have substantially greater amplitude than a 400 cycle or a 1000 cycle reed.



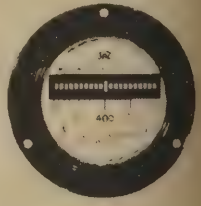
• **STABILITY** — All meters are permanently calibrated at the factory and do not require subsequent adjustment. J-B-T reeds have relatively high Q characteristics, an especially desirable factor in electronic circuits. Wave form or external fields do not ordinarily have an adverse effect. Built with no pivoted parts and with lock washers at every critical point, these rugged meters can take rougher treatment than many instruments.



• **TRUST THE METER** — If a meter plugged in on a 60-cycle AC power line does not indicate exactly 60 cycles, trust the meter. Power supply may momentarily be off-frequency due to changing load conditions. All J-B-T Frequency Meters are meticulously calibrated at the factory, entirely independent of frequency of power supply. Production and inspection equipment are checked regularly against National Bureau of Standards frequency signals.



MODEL 21-FX, 5 reeds, matches other 2½" panel instruments.



MODEL 31-FX, 5 reeds, standard. For appearance when operating, see "RESPONSE PATTERNS," above.

MODEL 30-FX, 5 reeds in each of two frequency ranges.

MODEL 33-FX-ser. A, 9 reeds for measuring frequency of high-cycle power sources.

MODEL 36-FX-21, 21 reeds for close reading over 380-420 cycle band Shown operating at 400 cy.

VIBRATING REED FREQUENCY METERS

J-B-T INSTRUMENTS, INC.

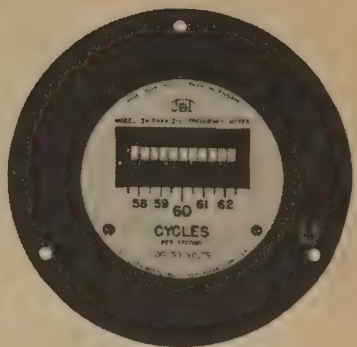
SEALED FREQUENCY METERS



FHXX TYPE Sealed meters, glass-to-metal construction, with solder terminals and detachable flange, supersede the former FHX sealed meters. While JAN-I-6, MIL-M-6B, and MIL-M-10304B (Type MR36) do not refer specifically to frequency indicators, the FHXX series uses the front mounting dimensions of these specifications, and meets or exceeds the sealing requirements, and for 3½" meters, electrical requirements, including 3000 volt breakdown. (1½" and 2½" meters meet 1000 volt breakdown.‡‡) Electrical characteristics and accuracy are the same as for corresponding F models without the HXX designation. Sampling procedure includes a test in water where the absolute pressure of the air above the water is reduced to 2.5 inches of mercury (approx. 57,000 ft. altitude) and is maintained for one minute. Available in 3½", 2½" and 1½" cases. For dimensions, see Table, Lines 1, 3 and 8. Standard voltage is 100-130.

MODEL 15-FHAC, 1½"; widely used as frequency standard for cathode follower circuit.

MODEL 21-FHXX, 2½"; 5 reeds, cased to match other 2½" panel meters.

MODEL 34-FHXX-Z-11, shown half size. Accuracy, ±0.2%

REVISED DIAL APPEARANCE

Shipments during the life of this catalog may include meters with dials somewhat different from those pictured here. Dials are being steadily modified to use the revised trademark as adopted during J-B-T's Silver Anniversary Year. Many 3½" frequency meters also are carrying the designation Series A after the model number (as in the 34-FX-ser. A on preceding page). Such instruments have additional ruggedness and sensitivity, and unusually uniform amplitude over the entire span of the meter. However Series A are otherwise interchangeable as to mounting dimensions and circuit characteristics with other meters bearing the same model number.

NOTE ON METER VOLTAGE

J-B-T Vibrating Reed Frequency Meters of all sizes normally are made with two studs and are designed to be connected across one phase of a multi-phase line. The single phase voltage where the meter will be used thus becomes the voltage to be specified for the meter. Special meters with extra studs are made for the purpose of using at two or more voltages, not additional phases.

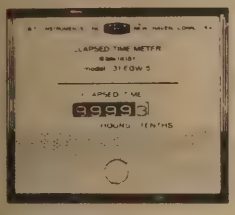
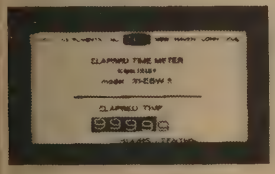
ELAPSED TIME & FREQUENCY TIME METERS



J-B-T INSTRUMENTS, INC.

J-B-T 32nd Year

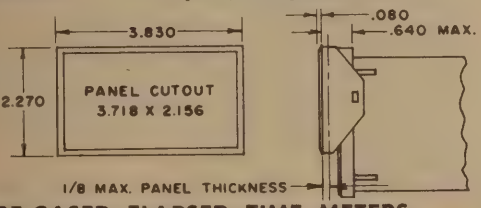


• USES AND ADVANTAGES OF ELAPSED (OR RUNNING) TIME METERS

To record operating time of AC electrical and electronic equipment, these self-starting synchronous instruments normally register in 1/10th hour steps to 9,999.9 or 99,999.9 hours, then automatically reset. They are widely used for tube life, TV equipment, punch presses, conveyors, oil burners, ground support equipment, maintenance schedules, etc. J-B-T engineers recommend the AC type of elapsed time meter for superior accuracy, especially where voltage or ambient temperature vary widely.

New EG SERIES for High Visibility; Modern Picture Window Optional

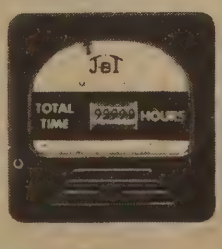
MODEL 31-EGW-5 for standard flush type mounting.



Same model with 13A-239 metal half-bezel.

EG ELAPSED TIME METERS. These are designed to give a bright, jewel-like look to panels when used alone, in multiples, or in conjunction with other instruments such as the matching new FG series of frequency meters. A gleaming textured metal shroud below the dial and a clear-plastic case front 3½" wide x 3" high give high visibility to the numeral read out. Dimensions are same as line 9 for FG meters on opposite page. For optional picture window frame effect, on panel area 3.83" wide x 2.27" high, add preferred 13A-239 metal, or 13A-234 molded half-bezel adapter. (See panel cut-out and mounting detail drawing below.) The quiet, sturdy motors and extensively field-tested mechanisms of other J-B-T elapsed time meters are used in the EG series. Two models are catalogued. Other voltages, frequencies, numerals and 2½" EG Series will be quoted.

31-EGW-5, (illus. at top) 5 wide digits, 0-9,999.9 hours, 60 cps, 110-125 volts .. **$22.60**

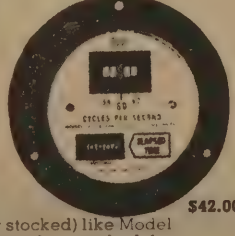


31-EGW 6 wide digits, 0-99,-999.9 hours, 60 cps, 110-125 volts **$23.10**

13A-239 and 13A-234 half-bezel adapters, see opposite page.

Panel dimensions for picture window mounting of FG and EG meters.

3" SQUARE-CASED ELAPSED TIME METERS



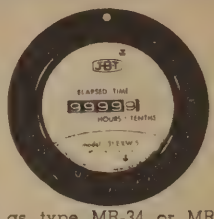
MODEL 31-ES. The square black molded case matches the appearance of other 3"x3" panel meters including **FS** series of frequency meters described on the preceding page. Unlike line 10 of the table shown there, depth behind panel (b) is 2$^{27}/_{32}$", and terminals are located on horizontal center line, each spaced ½" from center (G). Variations can be made for 99,999 hours (suffix U), 230 volts, matte finish or 50 cycles. Now supplied with tenths in red on white, and units in white on black.

31-ES, 60 cy., 110-125 volts, 0-9,999.9 hours **$19.75**

CLEAR PLASTIC ELAPSED TIME METERS

EPL TYPE. See Print SK-102 (C) for 2½" rectangular Model 21-EPL and SK-108 (C) for 3½" rectangular Model 31-EPL. Both types are made to order. The EG Series above is recommended for new designs.

ELAPSED TIME — FREQUENCY METERS



31-FE SERIES. Conserves panel space and centralizes information by combining elapsed time meter with frequency reeds. A separate exciting coil for the reeds achieves close control of reed amplitude and frequency. Reads 0-9,999.9 hours and 58-62 cy. with 5 reeds, at 100-130 volts; self starting. Tenths, red on white; other numerals, white on black. Black metal case with front mounting per Table of Dimensions, line 6. Power consumption, 4.7 watts. TEMPERATURE TESTERS AND ACCESSORIES

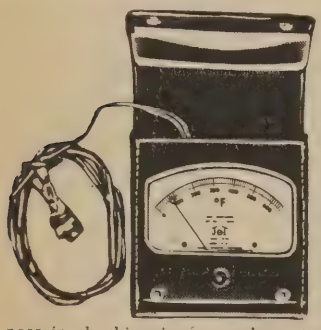
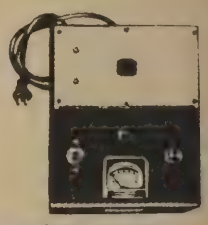
J-B-T INSTRUMENTS, INC.

FOR APPLIANCE SERVICING, QUALITY INSPECTION, AND LABORATORY SET-UPS

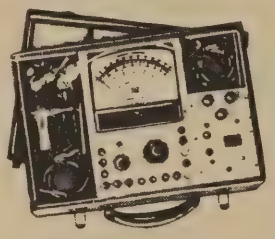


OVEN OR HEAT CHAMBER TESTERS

MODEL 23-JP-1. This new edition of a long-time favorite portable indicating pyrometer saves time and furnishes reliable information in temperature testing. For instance, when servicing and setting thermostats, the 23-JP-1 continuously reads appliance temperatures as they change. The 0-650°F. dial, with 2.48" scale arc has 10° divisions, readable to 3°. The pocket-sized, scuff-resistant, black vinyl carrying case measures 4½"x2⅞"x4¼". Characteristic of more expensive pyrometers, this model is automatically compensated for ambient temperature. Thus, the Tester eliminates calculations, avoids likelihood of serious error, as temperature changes inside the instrument itself, and gives reliable direct readings. Supplied with attached SA-116, 5½' calibrated thermocouple, clip, and convection shield **$33.00**



MODEL 32-JP-3. This time-tested model has an instrument-type carrying case of natural finished mahogany 6⅛" x 3⅞" x 4½" over hardware. The glass-covered indicator shows 0-650°F. range in 10° divisions readable to 2½° on a 2⅜" scale arc. Exceptionally fast, continuous response. Automatic compensation for ambient temperature is a valuable feature whether the tester is used for service work, sales demonstrations, or inspection. Attached SA-116, 5½' thermocouple, clip for affixing to grill and convection shield included **$36.00**



MODEL 32-JP-7. This model is recommended as the most versatile and easiest to read of this J-B-T series. The 0-650°F. scale is more than 4" long. Automatic compensation for ambient temperature is included, so that temperatures are read directly and without calculations. The 32-JP-7 also provides color-coded external binding posts. These permit quick attachment or interchanging of various J-B-T thermocouples placed in one or more of the heat zones to be checked. An SA-116 5½' thermocouple with attachment clip and convection shield is supplied and is left attached when the tester is carried. For maximum usefulness in checking irons, washers, toasters, clothes dryers, etc., use appropriate accessory thermocouples. Tester price includes stitched Ever ready case, 5" wide x 5½" high x 2¾" deep, of sturdy, scuff resistant black vinyl. **$40.00**

IRON TESTER

MODEL 32-JIT. Self-contained bench-type tester; checks all makes of irons; measures thermostat temperatures; shows open or short circuits. Automatically compensated for room temperature. Also indicates operating temperature of the sole plate (working surface) on non-electric or cordless irons. Black metal base; overall size 10" x 12" x 5½", scale 0-650°F, 15 amp fuse. 6' cord, 110 volt, 50-60 cycles. **$42.50**

Includes two SA-162 resistance bulbs, two SA-116 thermocouples, electrical leads, and AS-TR-2 built-in transformer. **$142.00**

MODEL 61-JRT (LESS TRANSFORMER). Same unit, same scales except no reading in amperes; AS-TR-2 transformer omitted. **$126.00**

AS-TR-2 Transformers for use with Model 61-JRT to provide readings of two current ranges: 0-30 and 0-60 amp. AC **$19.00**

HEAT INDICATORS

MODEL 32-JG PYROMETER IN SN-10 STAND. Mounted in sloping front black unbreakable molded stand, 4¼"h. x 4¼"d. x 3⅞"w., with 5-way binding posts. Automatically compensated for ambient temperature. Medium resistance system, damped for quick reading on 3.16" scale, assures ruggedness and pointer stability. For ±2% accuracy, use only the type and resistance of thermocouple provided; if extra length — coil it -- to maintain calibration. For convenience, an extra thermocouple and lead are suggested.

Description

The RCA WV-38A Volt-Ohm-Milliammeter is a rugged, accurate, and extremely versatile instrument designed for service calls, industrial applications, and all-around shop and lab use. The extra-low 0.25 and 1.0 volt DC ranges are specially useful for servicing all types of low-voltage circuits. The wide range current scales are of value in adjusting color TV receivers, TV cameras, and power-supply drains. The ohms scale can be used for trouble-shooting all types of circuits and electronic parts. The special dB scales are ideal for high fidelity and broadcast-audio tests.

A convenient function switch is provided with AC, +DC, and —DC positions. The +DC and —DC positions of this switch reverse the polarity of the test leads — a feature that is als helpful in checking the front-to-back resistance ration of electrolytic capacitors and many types of semiconductor devic

Two special silicon diodes are used to protect the meter movement against burnout due to accidental overload. A fus protects the precision multiplier in the ohms network.

The WV-38A is completely portable, requiring no external power source. Five internal batteries (not provided) are used the ohms function (4 penlight cells and 1 "D" flashlight cell).

escription

e RCA VoltOhmyst® WV-77E is designed to measure AC rms e-wave voltages from 0.1 volt to 1500 volts, DC voltages m 0.02 volt to 1500 volts, peak-to-peak voltages from 0.2 volt 4000 volts, and resistance values from 0.2 ohm to 1000 egohms. The AC voltmeter portion of the WV-77E features electron tube as a full-wave signal rectifier. The meter ading in AC-voltage measurements is a function of the full ak-to-peak value of the measured waveform. The WV-77E s a high input impedance on all DC- and AC-voltage nges. This high input impedance allows the use of the WV-77E circuits where instruments with a lower input impedance uld result in loading of the circuit under test, and a resultant or in reading the operating voltage.

The VoltOhmyst utilizes a push-pull balanced DC-bridge circuit with the meter in the plate circuit. This circuit affords excellent linearity of response, good stability, and very high input impedance.

Additional features of the WV-77E include provision for zero-center indication, useful in discriminator and bias measurements; separate scales for low AC-voltage measurements to assure accurate readings; a circuit design which allows measurement of AC in the presence of DC; a separate DC probe with a 1-megohm resistor which minimizes capacitance-loading effects; and electronic protection against meter burn-out. In addition, the resistors in the resistance divider network are protected by a separate fuse.

scription

WV-500B VoltOhmyst is a solid-state, battery-operated tronic voltmeter. The instrument measured DC voltages from to 1500 volts, DC current from 2 microamperes to 1500 amperes, AC (rms) voltages from 0.1 to 1500 volts, AC -to-peak voltages from 0.5 volts to 4200 volts, and stance values from 0.2 ohms to 1000 megohms.

even overlapping ranges are provided for AC rms and stance measurements, and eight ranges are provided for oltage and current measurement. Accuracy for the DC AC rms functions is ±3% (of full scale reading).

e WV-500B has an input resistance of 11 megohms on all anges to prevent overloading the circuit under test.

pecial solid-state circuitry is used in the WV-500B to assure stable, drift-free operation with minimum effect due to temperature variation. Advantages of solid-state construction include the elimination of warm-up time and a reduction in zero-shift that can occur in tube-operated voltmeters.

Since the WV-500B is battery-operated, the measuring circuit is completely isolated from the ac power line. The instrument can be used to make measurements on equipment with high ground potentials, an important feature in many industrial and laboratory applications.

Additional features include zero-centering of the meter pointer, and a circuit design that permits measurement of the ac component of an ac signal. The meter movement of the WV-500B is electrically protected against burnout.

Description

The RCA WV-120A and WV-503A Power-Line Monitors are designed for use by industries, laboratories, and radio-TV and appliance repair shops where it is important to know the power-line voltage at all times. These instruments provide a continuous, accurate indication of the AC line voltage at a glance, without the inconvenience of handling probes and switches or the necessity of selecting one of several scales to determine the proper meter reading.

Usd in conjunction with a variable isolation transformer, an RCA Power Line Monitor is a valuable aid in selecting line voltages for such applications as TV servicing, test instrument calibration, and the operation of electronic equipment that requires a known line-voltage supply.

The RCA WV-120A and WV-503A Power-Line Monitors provide a continuous, accurate indication of the AC line voltage at a glance.

Both instruments can be used on AC power-line sources with frequencies of 25 Hz to 400 Hz. They feature accuracy of ±2% at 120 and 240 volts, ±3% at scale ends. The meter has a special expanded scale with large, easy-to-read voltage designations. Also, the tip of the meter pointer is made wide enough to be seen clearly at a considerable distance from th instruments. As a convenient means of reference, the nominal AC line-voltage standard of 120 or 240 volts is printe in red.

The meter movement is a moving-vane type. This type of meter indicates rms values even when the waveform of the power-supply voltage is distorted. (Peak reading and peak-to-peak reading AC voltage measuring circuits, such as used in conventional VTVM's are calibrated on the basis of pure sine-wave voltages, and such meters do NOT indicate the true rms value of distorted waveforms.) The meter movement is only slightly damped and therefore has fa response. This feature is highly desirable because it permits the meter to indicate the presence of line-voltage "bounce" or fluctuations.

- **Supplied with shielded direct/low capacitance probe and cable**

scription

RCA Super-Portable 3-Inch Oscilloscope will help you solve ally any electronics servicing problem you may encounter e or outside the shop. The low cost and high performance e RCA WO-33A have made it popular as a monitor and le-shooting 'scope in black-and-white and color TV dcasting studios, and in professional service shops. gh gain and exceptional bandwidth make this instrument for general servicing and alignment work in black-white and color TV trouble-shooting, signal tracing, and surement; for audio high-fidelity and stereo work; for pes of sweep alignment; and in all types of computer ndustrial applications.

novel feature of the WO-33A is the Vertical Input Attenuator h automatically switches the amplifier from Wide Band to Narrow Band when in the three highest gain positions.

A phase control is provided for varying the phase of the internal sweep voltage when the "LINE" position of the H/SWEEP SEL control is used, enabling the WO-33A to be phased with an external line-frequency sweep oscillator.

The WO-33A is equipped with a specially designed, single-unit Direct/Low-Capacitance probe and cable (WG-349A). When the Low-Capacitance input is used a special high-impedance circuit in the probe is connected in series with the test point and the 'scope, reducing circuit-loading effects and permitting the WO-33A to be used in circuits which would not function properly if loaded down by a conventional oscilloscope.

Description

The WO-505A is a solid-state, high-performance oscilloscope designed for general purpose use. Features such as a flat-face cathode-ray tube, return-trace blanking, illuminated graph screen, and camera mounting studs make this oscilloscope ideally suited to industrial, laboratory, and servicing applications.

Frequency response of the vertical amplifier is flat, ±1 dB, from DC to 5 MHz, and is usable up to 10 MHz. The oscilloscope has exceptionally high gain of 15 millivolts peak-to-peak per inch on the high-sensitivity range.

The sweep frequency is adjustable up to 1 MHz in 6 ranges, permitting lock-in of signals up to 10 MHz. The level of sync signal applied to the sweep oscillator is adjustable, so that synchronization is stable throughout the sweep range. Pre-set TV V and H sweep positions are provided for convenient television servicing. These positions insure automatic lock-in on vertical and horizontal sync and blanking pulses. A separat phase control varies the phase of the sweep voltage when th "LINE" position of the sync or H amplifier switch is used. Thi control is used in TV alignment for phasing the oscilloscop sweep with the output of a sweep generator.

scription

RCA WR-50B RF Signal Generator is a highly versatile, ly portable test instrument designed for use in the shop or e field for general television and radio servicing and applications.

e unit is particularly well suited for such applications as ment and signal tracing of AM, FM, High-Fidelity and ens' Band receivers, alignment of low-frequency IF fiers in television receivers, and signal tracing and trouble- ing in nearly all sections of television receivers.

e 455 kHz and 10.7 MHz sweep positions make the WR-50B cularly useful for sweep alignment of both AM and FM vers, especially since the introduction of several new M transistor radios in which sweep alignment of both its is recommended.

e variable oscillator covers the fundamental frequencies from 85 kHz to 40 MHz in six ranges. For higher frequencies, harmonics of the high range can be used. A vernier tuning control permits precise setting of the output frequency. The RF output can be modulated with the internal 400 Hz oscillator, or with an external audia signal. The modulation level is adjustable.

A two-position attenuator switch, together with a variable attenuator control provide complete adjustment of the RF ouput level.

The crystal oscillator circuit in the WR-50B enables the instrument to be used as a crystal calibrator. A convenient crystal socket is provided on the panel. This crystal oscillator can be used as a frequency calibration reference for the variable oscillator, or can be used directly as a crystal-controlled signal source.

The WR-52A Stereo FM Signal Simulator is designed to generate the signals necessary for service, alignment and maintenance of Mono and Stereo FM receivers and multiplex adaptors. In addition to its value as a service instrument, the three low-distortion sine-wave frequencies, the crystal controlled 19 kHz and 38 kHz frequencies, the adjustable 100 MHz carrier make the WR-52A an extremely useful test instrument for FM broadcasters and manufacturers of stereo FM equipment.

A meter is included on the instrument to indicate the RF deviation of the FM signal from 0-75 kHz (75 kHz deviation represents a modulation level of 100%).

Separate color-coded scales are provided for stereo and mono. A calibration mark is also provided on the meter for convenient and accurate adjustments of the 19 kHz subcarrier level.

The RCA WR-52A Stereo FM Signal Simulator provides the following signals:

- Composite stereo output signal for either left or right channel.

en color bars are provided simultaneously in the color attern, including R-Y, B-Y, G-Y, I and Q signals, spaced at 30 degree phase intervals. This pattern is for use in checking color phase and matrixing circuits, and adjusting the automatic frequency phase control (AFPC). Narrow brightness pulses are added at the edges of each color bar to aid in checking the color "fit" or registration of the brightness and color signals.

The dot pattern is used primarily in convergence adjustment. The pre-shoot and over-shoot areas (small black edging preceding and following each dot) can be used to estimate the overall quality of the receiver alignment. The cross hatch pattern is for use in adjusting linearity in both black and white and color receivers, and as an alternate pattern for adjusting convergence. Consisting of a fixed number of vertical and horizontal lines, this pattern can also be used to check receiver overscan adjustment. The blank raster function is useful for both purity and color temperature adjustment.

Description

The WR-514A TV Sweep Chanalyst has the combined features of a sweep generator, marker generator, and marker adder. RF, IF, video and ChromAlign output sweep signals permit alignment of VHF tuners, IF amplifiers, video amplifiers, and color bandpass amplifiers.

Seven crystal-controlled, IF markers are provided to identify points on the sweep curve. Marker frequencies are 4.5 MHz, 41.25 MHz, 41.67 MHz, 42.17 MHz, 42.67 MHz, 45.75 MHz, and 47.25 MHz. If desired, an external marker generator can be used to provide markers at other frequencies. A "spare" marker function can be used to provide another marker at any frequency from 39 to 50 MHz when a crystal of the desired frequency is inserted. This system of adding the markers prevents distortion of the sweep curve caused by marker overload. The marker signals are also available directly through a panel connector. Audio modulation can be applied to the signals when the signal is used separately for applications such as trap alignment

RCA's special ChromAlign chroma sweep signal, combining a 45.75 MHz carrier and an IF sweep signal is provided for aligning color bandpass amplifiers. Both the sweep level and carrier level are adjustable, so that the circuit can be aligned at the signal levels specified in the receiver manufacturer's service data.

RF sweep output is provided for each of the 12 VHF vision channels. The sweep width of the RF, IF, and v sweep signal is continuously adjustable.

Output voltage of all sweep signals at the maximum se of the attenuator is at least 0.1 volt RMS. Maximum vari of output amplitude is 0.1 dB/MHz over any 10 MHz po of the sweep signal, assuring an accurate display of ci bandpass characteristics.

The WR-514A also provides FM sweep output from 8 108 MHz in two ranges. The sweep width is adjustable u 20 MHz. A sweep signal in the 10.7 MHz FM IF range is available. Markers in this frequency range can be applied u an external RF signal generator.

Return-trace blanking is included in the WR-514A to pro a zero-reference line during alignment. A trace reverse sw is provided for selection of horizontal sweep direction so frequency markers are in proper sequence as illustrated i service manuals

A switch is also provided for bypassing the demodula signal amplifier, connecting the signal directly to the osc scope. This permits the vertical gain of the sweep trace be calibrated.

escription

e RCA WR-99A Crystal-Calibrated Marker Generator nbines in one compact instrument the functions of a ltiple-marker generator, crystal calibrator and a heterodyne quency meter. Featuring extreme accuracy and stability r a wide frequency range, the WR-99A is ideal for servicing i aligning color and black-and-white TV receivers, mmunications and other equipment operating in the quency range of 19 to 260 MHz.

Vhen used as a heterodyne frequency meter, the frequency an unknown signal can be quickly measured by feeding ito the instrument and reading the frequency directly from dial.

The WR-99A includes crystal-controlled 10 MHz and 1 MHz illators for calibrated accuracy. The VFO frequency as well he frequency of an external signal may then be checked ainst internal calibrating beats at 1 or 10 MHz intervals oughout the tuning range.

A switch-type attenuator in the WR-99A provides attenuation in continuous steps over a range of 60 dB on all frequencies. Double shielding of the oscillator reduces leakage to well below the full attenuated signal; permitting control of marker amplitude right down to the noise level of TV receivers. A special coaxial cable is provided with the unit for coupling into the test circuit.

The VFO signal also may be modulated internally with both 4.5 MHz and 600 Hz, a useful feature for adjustment and alignment of sound-IF amplifiers and detectors. The 4.5 MHz signal produces dual sound and picture markers; the 600 Hz modulation will produce a horizontal-bar pattern when the output signal is set to the frequency of the picture carrier or picture intermediate frequency. The 4.5 MHz output signal may be modulated with 600 Hz for visual alignment of the detector.

Description

Completely portable and requiring no external power source, RCA's WT-501A tests transistors both in-circuit and out-of-circuit, tests both low and high-power transitors, and has both NPN and PNP sockets to allow convenient transistor matching for complementary symmetry applications. Three color-coded test leads are provided for in-circuit testing. Special low-impedance circuitry assures reliable in-circuit testing.

The instrument is designed to test transistor for dc beta from 1 to 1000, collector-to-base leakage (Icbo) as low as two-microamperes, and collector-to-emitter leakage (Iceo) from 20 microamperes to one-ampere. Collector current is adjustable from 20 microamperes to one-ampere in four ranges, permitting most transistors to be tested at their rated current level.

Power transistors can be tested with Ic up to one-ampere. A DC forward current transfer ratio curve can be plotted. The instrument can also test the relative in-circuit DC current gain of a transistor.

A 100 microampere meter movement is used in the measuring circuits for the various test functions, and precision resistors are used to insure accurate test results. Normal maintenance includes only replacing the batteries as neccessary.

The WT-501A is also a convenient instrument for making a check of the relative front-to-back ratio of diodes. An important feature is the ability to check the diode at an appropriate current level.

†Simpson VU meters meet all the Electrical and Ballistic specifications established by Bell Laboratories and American Standards Association as required by broadcasting, communication and sound engineers. They are available with either type A or B scales. Type A scale stresses the level in VU for monitoring wire lines. Type B scale stresses percent use of transmitter output and is the standard for broadcast service. Impedance is 3900 Ω @ "0" VU deflection.

Simpson CENTURY PANEL METERS

Introducing Simpson's new panel meter design concept. Now you can have a modern design with rugged phenolic and glass construction.

CALIBRATIONS

All DC meters listed below have the Simpson self-shielded movement (calibration not affected by stray magnetic fields or magnetic mounting). All AC meters have the Simpson Iron-vane type movement. AC Milliammeters and Ammeters are calibrated for use on 25 through 800 Hz. All AC Voltmeters are calibrated for use on 25 through 125 Hz. Calibration at frequencies up to 800 Hz can be made. Contact your local Distributor for prices.

mpson VU meters meet all the Electrical and Ballistic specifications estab-hed by Bell Laboratories and American Standards Association as required by oadcasting, communication and sound engineers. They are available with ther type A or B scales. Type A scale stresses the level in VU for monitoring re lines. Type B scale stresses percent use of transmitter output and is e standard for broadcast service. Impedance is 3900 @ "0" VU deflection.

†External Multipliers, Model 183, are furnished on 2½" DC meters 750 volts or higher; and on 3½" and 4½" DC meters 1000 volts and higher. All others are self-contained.
‡DC ammeters are self-contained for ranges up to and including 50 amperes. Higher range DC ammeters (50 MV) listed above are calibrated for 5 ft. leads and require external shunts. See page 18 for complete listings.

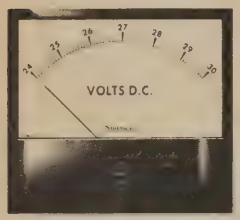
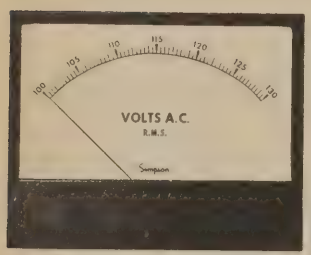
Simpson SEGMENTAL METERS

SIMPSON AVERAGE SENSING, TRUE RMS AND DC SEGMENTAL METERS



Segmental Voltmeters and frequency meters make it possible to measure very small changes in input conditions. The significant portion of the overall voltage or frequency range is expanded to occupy the full scale length. Thus, only that segment of the range that is important appears.

A.C. segmental voltmeters are available in either average sensing or true R.M.S. sensing units. When working with sine wave currents or when other measurements will be made with average sensing equipment, the average sensing meters are preferred.



When working with distorted waveforms, as would be encountered in constant voltage transformers, S.C.R. circuits, D.C. to A.C. solid state inverters or similar equipment, the true R.M.S. sensing meter would probably be preferred. In addition to the standard expansions and accuracies shown, special segmental voltmeters can be built on special order.

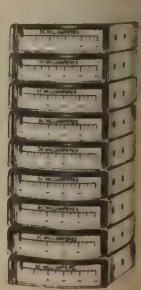
EDGEWISE FLAT PANEL METERS STACK HORIZONTALLY or VERTICALLY 1½", 2½"



Simpson s new miniature edgewise panel meter has a unique Self-Shielding Core Magnet Movement* that eliminates the protruding barrel which is prevalent in other edgewise meter designs. It lends itself to a design that is sharp, modern, extremely compact and with a meter scale that extends nearly to the full width and height of the meter. An optimum scale display area allows for the use of large, easy-to-read numerals on a horizontal plane.

Simpson PANEL METER ACCESSORIES

THERMOCOUPLES

Stock thermocouples are iron-constantan, calibrated to 5 or 10 ohms ±1% per table.

Types 21221 and 21224 are iron constantan thermocouple wire in a stainless steel overbraid for rugged service application where flexing or abrasion would cause deterioration of standard thermocouples.

Types 21222 and 21223 are iron-constantan thermocouples with a glass cloth overbraid. These thermocouples are suited for most general purpose use or for permanent mounting in protected sheaths or conduit.

NEW 3½"

• EDGEWISE CONTACTLESS CONTROLLER

This new edgewise controller offers many unusual features not found in an instrument of this size. Its compact design includes: dial illumination, mode indication lamps, plug-in load relays, front of panel mounting, removable knobs for tamper-proof settings, single or double set-points — in 8 stock DC models and 6 stock AC models. A wide variety of other configurations can be provided on special order.

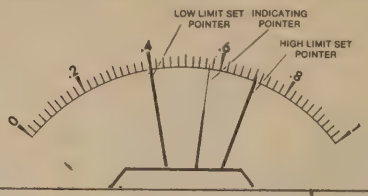
• METAL CASED CONTACTLESS TYPE

Rugged Seal construction withstands rigorous environmental conditions. Maximum reliability design and control, alarms, or limit applications. Photoconductor sensing eliminates all interference with the indicating meter. High gain transistor switch circuit provides accurate switching and a "dead band" of no more than 0.5% of full scale. Fail safe circuitry opens output relays in the event of power failure. Output relays are DPDT, with 10-ampere contacts. New pyrometer types are available for use with I/C or C/A thermocouples. Taut band types are available from stock with 10 μA full scale sensitivity.

• PHENOLIC CASE CONTACTLESS TYPE

Now available with **contactless** control point sensing... the same as used in Simpson's "Rugged Seal" controllers. Contactless operation offers better control accuracy, smaller "dead band," and absolute freedom from interference with the indicating meter. High gain amplifier is all solid-state for maximum reliability.

• PHENOLIC CASE CONTACT TYPE



Model 29XA is also available in a contact type design. This type is well suited for general purpose applications where cost and reasonable reliability are primary considerations.

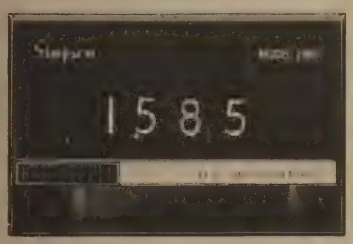
CONTROLLER ACCESSORIES

CURRENT TRANSFORMERS



Designed for use with 0-10 volt AC meters. Available **from stock**, they convert meter relays to AC current control units. Transformer may be located remotely from indicating meter. Ranges from 0-50 milliamperes up to 0-50 amperes are available for immediate delivery. Frequency Range: 30 Hz to 5 kHz. Accuracy: ±2%. (May be used with any 0-10 volt, 1000 Ω/volt, or 2000 Ω/volt, AC rectifier type meter.) Not for use in circuits where sustained overloads are possible.

SPECIFICATIONS

Accuracy: ±0.1% (F.S.), ±1 digit.

Resolution: 1 part in 1000.

Sample Rate: 5 readings per second, continuous.

Display: Non-blinking, with storage.

Number of Full-Time Readout Digits: 3

Readout Digits: Cold-gas glow tubes, 200,000 hour rated life.

Circuitry: Integrated circuits and solid-state components (except readout tubes).

Overrange: 100%. Number "1" automatically lights to the left of other digits to indicate overrange. When measured value exceeds overrange capacity, the "1" flashes — preventing erroneous readouts.

Underrange: Reverse polarity is automatically indicated by a light to the right of other digits. Linear 15% underrange permits reading negative values. Readout is a complement of actual reading.

MODEL 202 — ACCU-LOG®— A NEW CONCEPT IN VOMS

The first VOM to give you consistent "percent-of-reading" accuracy . . . anywhere on the readout scale!

ACCU-LOG has a special quasi-logarithmic scale. It gives you "percent-of-reading" accuracy anywhere on the readout scale, yet still allows easy zero adjustment with a linear portion at the low end. There's no need to keep readings at the high end of the scale, or worry about "percent-of-full scale" accuracy limitations. Other features you'll like: two low power ohmmeter ranges, overload protected taut band movement, and a large 7" antiparallax mirror scale.

External battery compartment makes battery changing faster, easier!

VOLTAGE RANGES
DC: 0.03 - 0.33; 0.1 - 1.1; 1 - 11; 10 - 110; 30 - 330; 100 - 1100 volts

EASIER TO READ 7" SCALES

MODEL 269 Series 3
100,000 Ω/V!

Now improved! . . . with a self-shielding Taut Band meter movement that gives better repeatability, plus faster pointer action. This new meter movement is combined with a new mirror scale; and knife-edge pointer, eliminating parallax errors. Large, readable scale is over 6 inches long. Accuracy is ±2% DC and ±3% AC, with new range coverage, too. One switch selects all 27 ranges. Battery replacement is quick and easy with the snap-on compartment. And the new 269-3 is protected from overloads with a replaceable 1.5 Ampere fuse at the input, and a varistor at the meter movement.

Complete with No. 00115 test leads, 4000 volt DC probe extension, and operator's manual.

Model 269-3 ..... **$98.00**

MODEL 263
64-RANGE DUAL-SENSITIVITY VOM
1½% DC ACCURACY

Dual sensitivity Volt-Ohm-Milliammeter has overlapping ranges — let's you place reading at the high end of scale for optimum accuracy. Large 7" scale makes readouts easier, too. Varistor protects the movement from even **200,000 per cent** overloads! 1½ volt alkaline battery assures maximum stability on low ohms range. External battery compartment for easiest replacement. See the chart below for complete specifications.
Complete with No. 00115 test leads, batteries, and operator's manual.

Simpson AC CURRENT LEAKAGE TESTER MODEL 229

FOR INDUSTRY • FIELD SERVICE • LAB • PRODUCTION

Small leakage currents can be dangerous! And even when they're not, current above the "threshold of perception" can cause a violent reaction from fear, resulting in serious physical injury.

Simpson's new model 229 is designed to test 120 volt AC appliances and electrical equipment in accordance with the proposed U.S. standard. It approximates the normal perception curve to within ±1.0 dB, and measures currents as small as 5 microamperes.

The 229 is ruggedly built for use on production lines and "in field" servicing. Operation is simple, and all ranges are protected from damage if accidentally subjected to line voltage. It's the ideal instrument for checking the safety of your equipment.

NEW!
Meets proposed U.S. Standards Committee specification (C101.1) for A.C. current leakage tests.

TO-6 TEL-OHMIKE® CAPACITOR ANALYZER

The TO-6 TEL-OHMIKE capacitor analyzer is a must for checking all capacitors. It is a moderately priced instrument with laboratory quality and accuracy—the highest accuracy of any instrument of its type available to the service trade!

- **LEAKAGE CURRENT** of electrolytics measured directly on meter. Four ranges; .06, .6, 6, and 60mA. Three ranges of DC voltage (continuously variable within each range) permit testing capacitors at exact rated voltage up to 600 volts.
- **POWER FACTOR** of electrolytics, up to 50% measured by Wien Bridge.
- **METER PROTECTOR** of solid-state design allows severe accidental over-loads without burn-outs.
- **MAGIC-EYE TUBE** simplifies bridge balancing for capacitance and power factor measurements. High gain amplifier provides greatly improved sensitivity.
- **PUSH-BUTTONS** color-keyed for instant range selection.
- **MODERN CASE:** Silver-grey hammertone finish, panel is charcoal grey with highly contrasting white designations. Measures 8⅞" high, 14⅝" wide, 6⅛" deep. Weight only 13 pounds.

- **CAPACITANCE BRIDGE** measures up to 2000 μF. Five overlapping ranges include exclusive 1 pF to 100 pF range. Special shielded transformer for bridge voltage. Extremely low AC voltage; 1.35 volts for electrolytic capacitors, 2.85 for all others, permits safe testing of all low voltage capacitors.
- **INSULATION RESISTANCE** of papers, ceramics and micas directly read on large meter. No guessing with neon lamps. Dual range—to 10KMΩ@ 30V for low voltage units . . . to 50KMΩ@ 150V for higher voltage components. Fast charge feature speeds testing of high capacitance units.

TEL-OHMIKES FOR RACK MOUNTING

Electrically identical to TO-6 and TO-6S. These models have a standard 19"w. x 10½"h. panel so that it can be mounted in standard relay racks.

FET V-O-M with AUTO-POLARITY

MODEL 602

1. **FET V-O-M with Auto-Polarity—convenient and time saving.**
2. **Low voltage range of 300 mV; 10 megohm AC input impedance and 11 megohm DC input resistance.**
3. **Simplified scale—only 4 arcs for all 38 ranges.**

signed to speed testing by reading upscale regardless of circuit polarity, yet handy push-ttons allow selection and determination of polarity when required. 0.3 V full scale in lowest nge on both AC and DC. Tester offers 38 ranges, but 24 AC/DC ranges are read from only o arcs on 4½" meter to keep dial clean and readable. Input amplifier incorporates a high gree of feedback so both AC and DC meter tracking scales are linear. In Auto-Polarity mode, strument is not adjusted for zero, but for zero or lowest null. This means zero adjustment can made from virtually any angle without introducing a parallax error. 50 μA suspension-type ter movement absorbs shocks and jars that would disable ordinary meters. Accuracy: ±3% all Voltage ranges except 1000V ±4%; ±4% on all current ranges; ±3% of DCV arc on sistance. AC ranges for frequencies from 50 Hz to 50 KHz.

Polystyrene

ROD TUBING SHEET

r radio and electronic applications, because of its very w loss factor at ultra high frequencies, Polystyrene is e ideal material for insulators, coil forms, shields, etc. has excellent arc resistance, is non-tracking and has lendid insulating properties. Because its water absorp- n is practically zero it has excellent dimensional ability.
